## General Comment

There are many reasons why you didn't built that pipeline in US territory. I don't know who told you you could do whatever you wanted in Mexico, but that it is not going to happen. Fortunately, this proyect has gained enormous traction on social media. Scientists, activists, local communities have joined efforts to communicate about itsridiculous risks. We know about it and we do not want it. The fraking, leake potential, noise, carbon production and even noise contamination makes it a terrible idea in itself. Yet, on top of that you think it is a great a idea to ship the gas through one of the most biodiverse areas in the world. About 1/3 of the WORLD'S cetaceans rely on el Golfo de California to reproduce. This project reeks of death. Mexicos fishing potential depends on the Golfo de California. Furthermore, the people that inhabit this region are highly dependent on the health of the oceans for fishing and ecotourism. This project will affect large portions of the Mexican territory in economic, health and environmental aspects. We strongly oppose to it. We will boicott all companies that invest in it. We are not your backyard.
