General Comment

This project is a serious threat to the environment and ecosystem services of the region. On the long term it could cause more affectations to the society and economy than the short term prospected benefits.

It harms directly the biodiversity of the area and can cause the decline of marine species endemic or distributed here. That's the case of whales that migrate yearly to reproduce in these areas. Moreover, the building of infrastructure to transport gas through this area as part of the "Zaguaro" project could also affect negatively the fisheries and cause huge economic negative impact at the local and regional level. This can affect not only Mexican citizens but also other closer populations like the US and other consumers.

This project should be reconsidered and must be stopped, as the harms can be irreversible and way higher for the planet and Society than the short term benefits.

Please stop this project.
