## General Comment

Hi, the approval of this project is of big concern because the exportation of liquefied gas through Mexican oceans, in specific, trough the Gulf of California (also known as Mar de Cortés) endangers marine wildlife, not only by threatening the biodiversity, but also by directly affecting the ecosystem services provided by the marine organisms, for example, whales acting as carbon sinks, absorbing nearly 33ton of CO2 on its lifetime (WWF, 2024), which is of concern because of the climate crisis we are experimenting lately
