General Comment

The information gathered over time shows that the project's benefits are very small compared to the impact it will generate over time. Whales are not the only inhabitants of the Sea of Cortez, but also countless species that contribute to the balance of life there. The gas pipelines and cargo ships would affect the entire biome in the area, a consequence that would in turn affect the populations residing there, both national and foreign, who coexist with life there. Therefore, it is vitally important to stop the idea of a gas project that would affect the area. We haven't even reached the sea yet, and the gas pipelines have already affected the fields that feed the people of the border state of Chihuahua. How will the entire area through which this pipeline passes be affected? The answer is simply negative.
