## General Comment

To government team and responsible agencies

"The transport of methane gas from the United States through the Gulf of California, in Mexico, puts the lives of whales and thousands of other species at risk, in addition, it threatens the lives of communities on both sides of the border and contributes to the emission of more greenhouse gases. The citizens of Mexico and the United States demand that they stop this project: the construction of the Sierra Madre gas pipeline and the Saguaro Energía liquefied "natural" gas plant in Puerto Libertad. The world demands to get out of the era of fossils and stop sacrificing territories and populations."

It demands that whales be protected from the threat posed by huge mess of the Gulf of California, a place considered the Aquarium of the World.

The Gulf of California is considered the Aquarium of the World and World Heritage Site for its very high biodiversity. It is home and breeding area for various species of whales and thousands of other species. However, it is being threatened because Mexico Pacific Holdings and other US companies want to use Mexico as a route to transport millions of tons of methane gas from Texas to the Asian market.

The Sierra Madre gas pipeline megaproject and the liquefied "natural" gas (LNG) plant in Puerto Libertad, Sonora aim to turn the Gulf of California into a Sacrifice Zone for fossil industry, aggravating the climate crisis and damaging the health of various communities. Due to the noise caused by ships and collisions with whales, this project is completely incompatible with the life and presence of marine mammals in the Gulf of California, but you can help us stop it with your signature and your mobilization.

Whales or gas? It is clear that we say: whales!
