## General Comment

First of all thank you for considering us on this project. As you may know all the environmental implications of this project in the sea, the destruction of current flora in the area, it will add problems to the current population that lives from fishing and the consequences of the accidents that every project of this nature incur.

Summarizing :

- destruction of flora and fauna
- destruction of the way of living of the people , they will not be able to continue fishing
- killing wales !! That are in danger of extinction
- will kill reefs and all the species that lives around them

The project is in the biggest natural aquarium in the world !!!

Please please , do not continue with this project.

We have enough damage in the state of Sonora with all the gold and copper mines that have accidents and damage water, food, people for money for business. That type of damage cannot be ammended with any money, is irreparable.. there is no way to go back.

Please please see for the future of the world : people animals plants water .. this is not the way to do more business , maybe with eco tourism will do, not in the same size or course, but it will save lives and change the course of the State .. thank you !!
