## General Comment

This project has demonstrated in several scientific papers the negative environmental impact on the seas. The vessels that are planned to be used are those with the highest numbers of accidents involving whales, due to their large size and design.

As well as noise pollution caused by them, fuel pollution to the sea and damage to marine ecosystems. Also highlight the damage to coral from this sand, as this project will build fossil gas stations, and the fourth largest plant in the world only to process it from liquid to gaseous state.

When the gas starts its journey not only harms the sea or whales, silently exposing thousands of people to toxic gases that are cancerous and invisible.

I hope my opinion is taken into account and win the way of conservation and respect for our environment. Recall that the Gulf of California since 2005 was declared by UNESCO as a Natural World Heritage Site because it is the Aquarium of the World.
