General Comment

This project should be actually eliminated due to the fact that it's attempting to exploit dangerous substances in unique marine ecosystems. It is now known that marine ecosystems are actually one of the best sites to capture carbon dioxide, and slow down global warming. It is as well one of the most important sites in marine biodiversity, many natural peotected area were established in this area due to this important feature of marine territory, and as it has been the trend due to the increasing importance of marine ecosystems, this decrees of protected areas were complaints to environmental regulations, this project could tear down the whole relevancy of the area and put biodiversity in risks, and marine ecosystem in crisis without any need, there are cheaper ways to exploit natural gas, and besides it is important to decrease CO2 emissions. This project should be canceled and replaced by more biodiversity conservation plans
