General Comment

I recommend under no circumstance this project be permitted so as to save the American Taxpayer billions of dollars. The extraction and burning of fossil fuels has created a green house effect and is heating the Earth to the point of extinction. To mitigate and combat heating expensive actions including but not limited to are: sea walls, coastal retreat, wildfire suppression, flood response, hurricane response, drought, famine, and war.

Also 300,000 people die annually from poor air quality. The lives and money needed to try and fix the damages caused by extracting and burning fossil fuels is well beyond any industry especially the heavily subsidized fossil fuel industry.

Better alternatives exists and we just need to use them and save the AMerican taxpayer.
