General Comment

I recommend under no circumstance should a permit be issued for importation or exportation of fossil fuels, for the following reasons:

1. Fossil fuel production and consumption have created a green house affect on the planet causing global warming and climate change. The damage of global warming are more frequent and intense wildfire, hurricanes, floods, sea level rise, drought, famine, and war. The damages cost trillions of dollars and exceed the gross domestic product of the United States. This is the cause of the National Debt and it will get worse when people retreat from the coastal areas.

We can't afford not to liquidate the fossil fuel industry and transition faster to clean renewable sources of energy.
