Address: United States,

General Comment

I recommend under no circumstance we import or especially export LNG, and only export electric energy if it is derived from clean renewable sources to include and limited to solar, wind, and geothermal or the following reasons:

1. fossil fuels are responsible for global warming / climate change and we need to phase out oil and gas production and consumption to preserve the planet. We need to do it faster. The Biden administration was successful in steering the country in the right direction with passage of the IRA bill but we have a corrupt and or incompetent administration owned by the oil and gas cartels.
2. The environmental and human damages caused by producing and consuming oil and gas costs countries, governments, and taxpayers more to mitigate, and clean up than all the GDP combined, and it will get even costlier as sea level rise gets higher and retreat, displacement from coastal zones is necessary for survival. In addition all the wars, droughts, and famine are caused by fossil fuels.
3. 40,000 Americans die annually from air pollution.
