## General Comment

I recommend denying the permit for the following but not limited to reasons:

1. fossil fuel production and consumption is a direct cause of climate change and this is undeniable and based on facts derived by scientific studies and acknowledged, but hidden by the fossil fuel industry itself since the 1960's. Climate change / global warming has and is causing damages in the trillions of dollars that include but are not limited to: sea level rise, drought, famine, war, wildland fire, flooding. Therefore it just makes economical sense to phase out fossil fuel to save the American taxpayer.
2. fossil fuels caused the National debt. The Democrats were the last governing party to have a National surplus. george w. bush squandered the surplus creaed by Democrats by going to war with Iraq over oil, now trump has added to the national debt by going to war with Venezuela over oil.
3. There are better and cheaper alternatives like solar, wind, tidal, geothermal, and eventually nuclear fusion.
4. The trump / republican administration is corrupt and using America's tax unded military to protect oil and gas cartels in Venezuela in a quid pro quo after the oil and gas cartels paid for the 2024 republican election campaign.
