Table 1. Special Medical Care and Logistics Program Costs for DOE for Fiscal Year 2025.

The number of eligible individuals has decreased from 2016 to 2025 (**Figure 1**). As the population continues to age, this trend is expected to continue or potentially accelerate over the next 5 years, which will have an impact on anticipated total costs for screening, referrals, treatment, and follow-up services. While the number of patients will decrease over subsequent years, SMCP total costs are expected to increase for FY 2026 and subsequent years (**Figure 2**). Primary factors for this projected increase are the global overall trend in increased costs for medical services and supplies, travel, and labor; the anticipated increase in the percentage of program participants traveling to Hawaii and CONUS for medical referrals, cancer treatment, and follow-up services; and ongoing inflation.
