General Comment

The Coastal Virginia Offshore Wind project uses Siemens Gamesa SG 14-222 DD direct drive turbines. These turbines use 308352 gallons of oil across 176 turbines, which is roughly 1752 gallons of oils, lubricants and hydraulic fluids per turbine spilling into the Atlantic Ocean and Chesapeake Bay. Please recall these turbines for a carbon and emissions review. You said you'd stop offshore wind. Why does CVOW get a pass?
