

**Department of Energy**  
**Build America, Buy America Act**  
**Proposed Project-Specific Non-availability Waiver**  
**For Advance Metering Infrastructure (AMI) Technologies**

**Proposed Waiver Summary:** The United States Department of Energy (DOE) – Office of Electricity (OE) is issuing a project specific nonavailability waiver of the manufactured products domestic preference requirements of section 70914 of the Build America, Buy America Act (BABA) included in the Infrastructure Investment and Jobs Act (Pub. L. No. 117-58) as applied to one federal financial assistance award to the Montana Department of Environmental Quality. This proposed limited nonavailability waiver allows the recipient/sub-recipient to purchase non-compliant Advance Metering Infrastructure (AMI) technologies.

**Duration of the Waiver:** The effective date of this waiver is from date of issue through the project performance period (until December 2028).

**Applicability:** The waiver will apply to eligible expenditures incurred by the recipient on or after the effective date of the final waiver for the period that the waiver is active.

**Recipient:** Montana Department of Environmental Quality (FYMBG7NQDL1)

**Sub-Recipient:** City of Troy (D3NDL3D2MTE4)

**Total estimated project cost related to infrastructure:** \$ 275,461

**Waiver Type:** Non-availability waiver of the BABA manufactured products requirement for the products listed below.

**Waiver Level:** Project-specific waiver for one sub-award.

**Funding Mechanics:** Funding for the infrastructure project is made available through the Funding Opportunity Announcement Infrastructure Investment and Jobs Act (IIJA) - Preventing Outages and Enhancing the Resilience of the Electric Grid Formula Grants to States and Indian Tribes (DE-FOA-0002736). The location of the project is the Troy, Montana.

**Description of Covered Items:**

- VC-934 Collector (PSC: 7G22; NAICS: 334220)
- VC-932 Collector (PSC: 7G22; NAICS: 334220)
- VC-820 Cell modem for each Collector (PSC: 7G22; NAICS: 334220)
- TR-1901 Relay (PSC: 7G22; NAICS: 334220)
- TC-1220RD 1ph Meter Module (PSC: 7G22; NAICS: 334220)
- PP-1320 Centron Poly Meter Module (PSC: 7G22; NAICS: 334220)
- DT-116 Centron reset key (PSC: 5120, NAICS: 334290)
- DT-410-BUN Programming Kit (PSC: 7E20, NAICS: N/A)

**Description of Market Research and Justification:** The recipient conducted market research and outreach from August 2025 – September 2025 to determine if domestically sourced AMI meters and associated components would be available for their project needs. A single vendor was contacted via email, determining that there is not a suitable BABA compliant option that utilizes the Tantalus software.

DOE completed market research from September 2025 – October 2025. Drawing on responses from leading AMI suppliers to a recent market survey (regarding product content and BABA compliance) - none of the surveyed manufacturers are currently able to comply with BABA content requirements. Most of the respondents' AMI material and equipment—meters, modules, and network devices—are built or assembled in Mexico, Thailand, the Philippines, India, Canada, with some content in the United States. Foreign manufacturers dominate the supply of critical components - printed circuit boards (PCBs), liquid crystal displays (LCDs), and metrology electronics - making BABA compliance unachievable for the respective U.S. meter products. The manufacturer-volunteered estimates of their respective U.S. content ranged from less than 5% up to about 15%, depending on the supplier and its specific models. The most expensive components of leading U.S. AMI power meters (endpoints, resins, printed circuit boards, meter electronics and batteries), are manufactured and assembled outside of the U.S. While there was a single domestic source found producing AMI smart meters, it was determined that it is not suitable for the use case defined in this project. That meter was an industrial-grade, domestic product, which is used most notably at grid interconnection points such as substations, transmission, and distribution interfaces.

**Impact Absent the waiver:** Absent this waiver, procurement delays would jeopardize project timelines and funding compliance. The lack of a waiver on this project could potentially lead to the lack of containment of forest fires, due to not being able to turn off power in a timely manner.

**Assessment of Cost Advantage of a Foreign-Sourced Product:** Under OMB M–24–02, agencies are expected to assess “whether a significant portion of any cost advantage of a foreign-sourced product is the result of the use of dumped steel, iron, or manufactured products or the use of injuriously subsidized steel, iron, or manufactured products” as appropriate before granting a nonavailability waiver. DOE’s analysis has concluded that this assessment is not applicable to this waiver as this waiver is not based on the cost of foreign-sourced products.

**Solicitation for Comments:** DOE is seeking public comments for all interested parties, including industry members and current manufacturers of the covered AMI product items listed above, regarding the potential availability of project-compliant products from domestic manufacturers. The proposed waiver is available for public comment for fifteen (15) calendar days. **Comments are due no later than Month Day, Year**, and must be submitted by email to the DOE Contracting Officer at [BABAWaiverComment@netl.doe.gov](mailto:BABAWaiverComment@netl.doe.gov). Please write “BABA WAV 2026-## - Montana – City of Troy” in the subject line of the email.
