Dear (b)(6), (b)(7)(C)

Pantex Unidentified Object Report

Enclosed for your review is the complete report for the Pantex Unidentified Object that occurred on September 2, 2015. If you have any questions or concerns, please contact me at (b)(6), (b)(7)(C) or (b)(6), (b)(7)(C) at (b)(6), (b)(7)(C)

Sincerely yours,

(b)(6), (b)(7)(C)

Pantex SS&ES Operations

Pantex Unidentified Object Incident Report

On September 1, 2015 at approximately 0710 hours, the Pantex Ground Surveillance Radar (GSR) detection system identified an unknown object flying in a non-threatening manner west of Pantex facilities in a northerly trajectory. The Protective Force (PF) responded in accordance with the NPO approved *Security Incident Response to Unmanned Aerial Systems (UAS)* plan. The object was initially identified just north of Highway 60 and was traveling in a northerly trajectory approximately 10-15mph. PF personnel were alerted to the object and subsequently dispatched to follow it in an effort to obtain as much information about the object as possible. PF personnel on the ground confirmed the presence of the object and maintained observation via PF vehicle. PF personnel followed the object for several miles north of the plant until it was no longer visible. (b)(7)(E), (b)(7)(F)

[REDACTED]

A subsequent comprehensive review of the incident was immediately initiated. The following text describes actions taken by Central Alarm Station (CAS) and Secondary Alarm Station (SAS) GSR operators, PF officers and Security Police Officers (SPOs) during the event.

At approximately 0708 hours, (b)(7)(E), (b)(7)(F)

[REDACTED]

CAS/SAS personnel alerted all PF to attempt to locate the object and report its position and direction of travel. A PF Lieutenant (Lt.) and SPO in the area spotted the object and followed it as it traveled north. The Lt. and SPO attempted to intercept the object as it traveled over Pantex Drive in an attempt to view the object directly from below. Although they were unable to catch up to the object, they stopped their vehicle and got out. Once outside, they noted that the object did not make any sound. Furthermore, the Lt. and SPO stated that they were unable to identify any type of propulsion system on the object while using binoculars to assess the object. After viewing it for 1-2 minutes, the object then continued north offsite. The Lt. and SPO then followed the object for several miles north of Pantex before they lost the object due to lack of roadway access. The location where the object was last seen was near County Road G and F.M. 1342. The Carson County Sheriff's office was notified when the object began to traverse off-site and requested to respond to the area and assist in locating the object. A Sheriff's Deputy met the Lt. and SPO at the point where the object was last seen. The Deputy stated that he did not see the object but would perform a search in the area for anything unusual. It was noted that the object seemed to increase in speed and changed direction as it was being followed. The last known direct of the object was that it was heading in an ENE direction. The Lt. and SPO were debriefed upon their return to the

Pantex Unidentified Object Incident Report

plant. Their perspective of the object was that it was a "diamond" type shape with it being more round at the top.

(b)(7)(E), (b)(7)(F)

. The SPOs stated that it was 100-200 ft. above the ground and they were able to track the object for 3-5 minutes. The SPOs location was approximately 75-100 meters from the object.

Other PF personnel that observed the object, including a SPO that was viewing the object through binoculars described it as being approximately 4 ft. tall and 2 ft. wide at the bottom. The object was also described as being thinner at the top. However, there were some discrepancies in the color of the object. Some personnel stated that it was black in color while others noted that it appeared to be silver, red and blue.

Video was obtained from the GSR tower that was closest to the object and subsequently sent to Sandia National Labs for further study (see image below titled, *Image from Ground Surveillance Radar Tower*). The video does not provide much detail of the object due to the distance of the object to the GSR tower. It should be noted that at no time did the object appear to be threatening in nature nor did it come to close proximity to any sensitive assets. The object remained over open unpopulated areas of the plant prior to it proceeding offsite. (b)(7)(E), (b)(7)(F)
