Trilab Distributed Storage Study for Maui

Sandia National Laboratories

Pacific Northwest NATIONAL LABORATORY

NREL NATIONAL RENEWABLE ENERGY LABORATORY

Frank Tuffner Francis.Tuffner@pnnl.gov and Michael Kintner-Meyer Michael.Kintner-Meyer@pnnl.gov | Pacific Northwest National Laboratory
Raymond Byrne rhbyrne@sandia.gov and Jim Ellison jelliso@sandia.gov | Sandia National Laboratories
David Corbus David.Corbus@nrel.gov | National Renewable Energy Laboratory

Objective

- To evaluate the effectiveness of distributed energy storage in mitigating the impacts of high photovoltaic (PV) penetration and variability on the Maui distribution system

Legend:
- Generator
- Wind Energy
- 69 kV
- 23 kV
- 69 / 23 kV Transformer

Kahului 32.33MW
Kaheawa I & II 51MW
HC&S 13MW
Maalea 200MW
Hana 2MW
Auwahi Wind 21MW

Study Tasks

- Task 1: Develop GridLAB-D models for selected distribution feeders
  - Perform analysis to estimate value of distributed energy storage for solar PV integration

- Task 2: Investigate benefits of advanced inverter control features to mitigate voltage and variable power output from solar PV (under high penetration scenarios)

- Task 3: Conduct preliminary electrical vehicle (EV) analysis
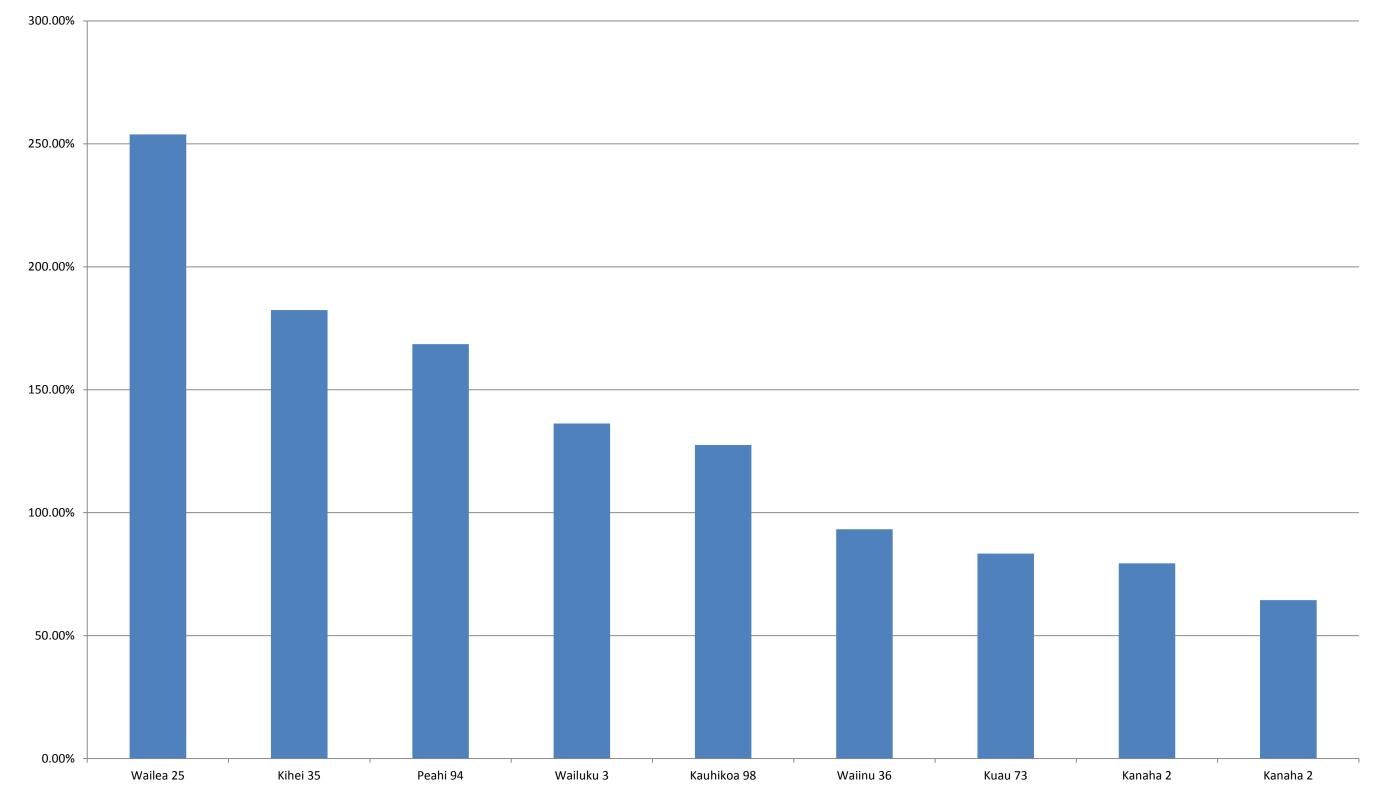

Overall Value of Study

- This study aims to understand how high PV penetration will impact the distribution system, and how effective distributed storage might be in mitigating those impacts
- Previous and ongoing work (such as the Hawaii Solar Integration Study) has been solely concerned with bulk power system

Deliverable

- Final technical report describing analysis results and GridLAB-D modifications
  - Planned for April 2013

DG as percent of daytime min load

Project Status

- Statement of work has been developed, in consultation with HECO (Hawaiian Electric Company)
- PNNL has created GridLAB-D models for the MECO feeders of interest

Next Steps

- Team will select feeders for analysis
- SNL will specify a storage module for use in GridLAB-D
  - Will allow for generic parameterization of battery storage systems
- PNNL will implement the SNL storage models in GridLAB-D
- NREL will provide the solar resource data for integration into the GridLAB-D models
- Team will perform analyses to study the value of distributed energy storage under a scenario of high PV penetration
