A strong and cohesive information security program is integral to national security. The U.S. Government requires certain information to be maintained in confidence to protect our citizens, democratic institutions, and activities within the international security community.

Marking notifies holders of classified matter of the protection requirements for the information. Markings and designations serve two primary purposes:

- Alert holders to the presence of classified information.
- Warn holders of special access or safeguarding requirements.

This resource was developed to assist Federal and contractor employees by providing examples of acceptably marked classified matter. Although examples of current or historical markings may be included, this is not a comprehensive source for all possible marking of classified matter.

Nothing in this document is meant to establish, imply, or mandate requirements. These are reference examples only. U.S. Department of Energy (DOE) and national directives take precedence over the examples in this document if there are any discrepancies at any time.

How to Use This Document

Examples illustrate markings for matter that contains classified information. Note that page markings, with the exception of top and bottom and front and back markings, are no longer required to be at specific locations on the page. More than one example may be required to fulfill all requirements. References and links for DOE and national directives are provided on the following page.

The examples exhibit markings that achieve minimum national and departmental requirements, but are for example purposes only. Facilities may have procedures and practices for marking that vary from this handbook; e.g., use of alternate stamps that include all required information. If you have questions, consult your site’s Classification or Security Office.

This resource is not a substitute for training in DOE document and data control. In addition, specialized training and formal designation is required in order to derivatively classify or declassify matter.

This resource document contains no classified information. The security classification markings, declassification instructions, and warning notices are for illustration purposes only.

1.0 MARKING EXAMPLES

1.1 Classified Information

1.1.1 Basic Marking Examples

---

**SECRET Cover Page**

Classifier marking must be placed on “first page” of the document, whether the cover page, title page, or first page of text and should be placed in the lower left corner.

Derivative Declassifier Review Stamp should be close to NSI Classifier Marking, preferably above it, but as close as possible.

S/RD Document with Mixed Levels and Categories Marking Matrix

NOTE: A marking matrix may be used when classified matter contains a mix of information at various levels and categories that causes the document to be marked at an overall level and category higher than the protection level required for any of the individual portions. This would allow an individual with a lower access level, such as an “L” cleared employee, to be given access to a document that he or she might not otherwise have been authorized access to.

Folder Containing Classified Documents

Folders containing classified matter, when removed from secure storage repositories, are conspicuously marked to indicate the highest level of classified information contained in the folder. A coversheet could also be affixed to the folder.

The folder is unclassified when it no longer contains classified material.
Top Secret, Secret, and Confidential Cover Sheets
The attached document(s) contains Foreign Government Information (FGI), as defined by Executive Order 13526, “Classified National Security Information,” that the foreign government protects at a level lower than U.S. CONFIDENTIAL.

Access to the attached information does not require an access authorization or personnel security clearance. However, access to this information must only be granted to persons with an established need-to-know and whose official duties require access. This information must not be disclosed to a third party government, individual, group, or organization not involved in the applicable agreement or treaty without the expressed, written permission from the originator.

This document(s) must be transmitted using approved U.S. classified methods unless this requirement is waived by the owning foreign government. It must be destroyed as required for a U.S. CONFIDENTIAL classified document.

When not in use, this document must be stored in a locked receptacle (e.g., file cabinet, desk, bookcase) that is accessible only by persons who have a need to know the information to perform their official duties to ensure protection against unauthorized disclosure or access by unauthorized personnel.

This Cover Sheet May Be Applied to All Qualified FGI Documents While Under U.S. Control in U.S. Facilities.

C/FGI-MOD Coversheet

A C/FGI-MOD coversheet (DOE F 471.2) is completed and attached to foreign government documents that are protected at a level lower than U.S. Confidential.

Marking of Transparencies and Slides
1.1.5 Marking Equipment/Parts

Classified Equipment Marking
Example 1. Marking Parts

Overall markings are stamped, printed, etched, written, engraved, painted, or affixed by means of a tag, sticker, decal, or similar device on classified material other than documents, and on containers of such material, if possible. If marking the material or container is not practical, written notification of the markings are furnished to recipients.

Caution. Before initiating any new marking policies, it is necessary to coordinate with the production engineers. War reserve and configuration control requirements mandate strict control over what is done to specific materials – markings cannot violate these rules. Any alternative markings under consideration must be compatible with the material being marked.
Example 2. Marking Parts

NOTE: Additional classification markings (e.g., classifier information) are furnished to those who have access to the parts if the markings cannot be placed on the equipment.
Example 3. Marking Containers

Containers are clearly marked when the parts are unable to be marked.
1.2 Unclassified Controlled Nuclear Information

Classified documents that also contain controlled information do not have the corresponding control markings unless they are portion marked. Therefore, when such documents are reviewed for declassification, any controlled information is identified at that time and marked accordingly. A declassified document that contains UCNI must be re-marked as UCNI after the classification markings are lined out.
Transmittal Containing UCNI with an S/RD Attachment (Left), and Re-marked Transmittal when Separated from Attachment (Right)
