

Honda Civic CNG Accelerated Testing – June 2013

Four model year 2013 Honda Civic compressed natural gas (CNGs) entered Accelerated testing during November 2012 in a fleet in Arizona. Each Civic will be operated for 255,000 miles. One-page vehicle maintenance logs are posted on nearby www pages. This information includes the date and mileage for all maintenance and repairs performed on the vehicles. The four Civic CNGs have been driven a total of 91,595 miles and the cumulative average fuel economy is 35.8 mpg. Note that initial mileage accumulation was slow due to baseline performance and battery testing.
