DOE Program Overview

Budget

Progress

Next Steps
The Program is an integrated effort, structured to address all the key challenges and obstacles facing widespread commercialization.

Nearly 300 projects currently funded at companies, national labs, and universities/institutes
DOE Support of Fuel Cell Technologies

Recent Statements by Secretary Chu

"These projects will help advance our fuel cell and hydrogen storage research efforts and bring down the costs of producing and manufacturing next generation fuel cells. These technologies are part of a broad portfolio that will create new American jobs, reduce carbon pollution, and increase our competitiveness in today's global clean energy economy."

"Projects like these fuel cell systems will help reduce fossil fuel use and improve energy reliability at military installations across the country."

“The benefits of a combined heat and power fuel cell system, coupled with the educational benefits of a living laboratory, not only advance clean energy technology, but help ensure that our nation remains competitive in the workforce of tomorrow.”

Notes: Hydrogen Fuel R&D includes Hydrogen Production & Delivery R&D and Hydrogen Storage R&D. *Due to Recovery Act funding of $42M, Market Transformation activities were deferred. Education projects were funded with FY10 appropriations.
Projected high-volume cost of fuel cells has been reduced to $49/kW (2011)*

- More than 30% reduction since 2008
- More than 80% reduction since 2002

*Based on projection to high-volume manufacturing (500,000 units/year). The projected cost status is based on an analysis of state-of-the-art components that have been developed and demonstrated through the DOE Program at the laboratory scale. Additional efforts would be needed for integration of components into a complete automotive system that meets durability requirements in real-world conditions.
**DOE Funded Accomplishments**

**Reduced cost of H₂ production (multiple pathways)**

**Vehicles & infrastructure**

- 170 fuel cell vehicles, 25 hydrogen stations
- > 3.4 million miles traveled
- > 146 thousand total vehicle hours driven
- ~ 2,500 hours (nearly 75K miles) durability
- ~ 5 minute refueling time (4 kg of hydrogen)

H₂ fuel cell buses (w/ DOT) have a 42% to 139% better fuel economy when compared to diesel & CNG buses

- Tanks can achieve >250 mile range
- Validated vehicle that can achieve 430 mi
- Developed and evaluated more than 400 material approaches experimentally and millions computationally

- Demonstrated cycle-life of >50,000 refuelings of metal tanks for forklift applications
- Developed safety courses, educated >17,000 first responders and code officials through introductory web-based courses and advanced hands-on training

**Projected High-Volume Cost of Hydrogen Production**

**Distributed Production (near term)**

- Electrolysis
  - Feedstock variability: $0.03 - $0.08 per kWh
- Bio-Derived Liquids
  - Feedstock variability: $1.00 - $3.00 per gallon ethanol
- Natural Gas Reforming
  - Feedstock variability: $4.00 - $10.00 per MMBtu

**Central Production (longer term)**

- Electrolysis
  - Feedstock variability: $0.03 - $0.08 per kWh
- Biomass Gasification
  - Feedstock variability: $40-$120 per dry short ton

**H₂ Production & Delivery Threshold Cost $2-$4/gge**

RFI: Total Cost of Ownership for Future Light-Duty Vehicles

RFI Closes: December 16, 2011
For Questions, Email: TCORFI@go.doe.gov

Lifecycle Costs of Advanced Vehicles
Component Cost per Mile in Year 2030
(except where indicated)

Feedback is requested on:
• The assumptions (aggressive, moderate or conservative levels of success for various technologies).
• The projection of cost reduction rates for technologies that are not yet fully commercial.
• The general financial analysis approach used.

Error bars include fuel price volatility (green) and different assumptions for technology success (red) (2030 timeframe)
Infrastructure is a Key Challenge

On a per-mile basis, infrastructure costs for electric-drive vehicles and fuel cell vehicles are comparable

Infrastructure Cost for Alternative Vehicles

Notes:
1. 2008 NRC study:
   - Low case: H2 cost $4/gge, capital for infrastructure is 40% of H2 cost, 60 mpg
   - High case: $5/gge
2. 2010 EU Mobility study (Automakers/Mckinsey):
   - Low case: $1,400 per car (5,000 H2 fueling stations in 2030, 12,000 in 2040)
   - High case: $2,800 per car (less optimistic technology progress)
3. 2009 NRC study:
   - Low case: $900 (Level 1 home charger, installed)
   - High case: $2000 (Level 2 home charger, installed)
4. 2010 EU Mobility study (Automakers/Mckinsey):
   - Low case: $2,000 (Level 2 home charger, installed)
   - High case: $3,300 (50%/50% mix of home & public chargers)
5. Vehicle Technologies Program:
   - Low case: 0-$700 (Level 1 home charger, without or with installing a dedicated circuit)
   - High Case: $800-$3,300 (Level 2 home charger, without or with panel upgrade)
Workshop convened industry and stakeholders with expertise in natural gas and hydrogen technologies, vehicle OEMs, CHP, policy, and regulations. The focus of the workshop is to facilitate the growth of natural gas and hydrogen use in the U.S. for transportation and other applications.

Workshop Activities Included:
- Discussion led by plenary speakers and expert panels
- Break-out sessions to identify key questions and resolutions on:
  - R&D Needs
  - Regulatory / Environmental Barriers
  - Innovative Approaches

Outcomes:
- Summarize the status of natural gas and hydrogen infrastructure
- Identify opportunities and barriers for expanding the infrastructure
- Identify synergies between natural gas and H₂ use
- Identify and prioritize specific actions to address barriers
- Identify the roles of government and industry in promoting growth of natural gas and H₂ infrastructure

Tuesday, October 18th and Wednesday, October 19th 2011
Argonne Facilities, Chicago, Illinois
Organized by the Argonne National Laboratory for the U.S. Department of Energy
“Energy Department Applauds World’s First Fuel Cell and Hydrogen Energy Station in Orange County”

"By providing the added value of electricity and heat, this approach provides a significant step in overcoming economic challenges with hydrogen refueling infrastructure."

August 16, 2011

http://apps1.eere.energy.gov/news/progress_alerts.cfm/pa_id=600
Tri-Generation or Combined Heat, Hydrogen and Power (CHHP) offers opportunities for use of natural gas or waste/biogas

Demonstrated world’s first Tri-generation station (CHHP with 54% efficiency)
- Anaerobic digestion of municipal wastewater-

Fountain Valley demonstration
- ~250 kW of electricity
- ~100 kg/day hydrogen capacity (350 and 700 bar), enough to fuel 25 to 50 vehicles.

H₂ is produced at anode

\[
\text{CH}_4 + 2\text{H}_2\text{O} \rightarrow 4\text{H}_2 + \text{CO}_2
\]

\[
\text{H}_2 + \text{CO}_2 \rightarrow \text{H}_2\text{O} + \text{CO}_2 + 2\text{e}^-
\]

\[
\frac{1}{2} \text{O}_2 + \text{CO}_2 + 2\text{e}^- \rightarrow \text{CO}_2^-
\]
**Backup Power Deployments**

**Nearly 900 kW deployed at ~200 sites**

Fuel Cell Technologies Program Source: US DOE 3/19/2013
ARRA deployments of fuel cells for lift trucks (~400) led to industry purchases of an estimated >3,000 additional fuel cell lift trucks* with NO DOE funding

The Case for Forklifts**
Compared to conventional forklifts, fuel cell forklifts have:
• 1.5 X lower maintenance cost
• 8 X lower refueling labor cost
• 2 X lower net present value of total system cost

* Based on estimates of industry orders and purchase.
**Preliminary Analysis
<table>
<thead>
<tr>
<th>Grants for Energy Property in Lieu of Tax Credits</th>
<th>Grant instead of claiming the Investment Tax Credit or Production Tax Credit. Only entities that pay taxes are eligible. (1603)</th>
<th>Construction must begin by expiration date, 12/31/2011.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Investment Tax Credit</td>
<td>30% tax credit for qualified fuel cell property or $3,000/kW of the fuel cell nameplate capacity. 10% credit for CHP-system property.</td>

</tr>
<tr>
<td>Alternative Fuel Infrastructure Tax Credit</td>
<td>30% of expenditures. $30,000 maximum.</td>
<td>Expires 2/31/2014.</td>
</tr>
</tbody>
</table>

Fuel Cell Motor Vehicle Tax Credit: $4,000 for LDV, $10,000-$40,000 range for heavier vehicles. Expires 12/31/2014.
Hydrogen Fuel Excise Tax Credit: $0.50/gallon. Hydrogen must be sold or used as a fuel to operate a motor vehicle. Expires 9/30/2014.
Alternative Fuel Infrastructure Tax Credit: $1,000 cap for residential use.
Residential Renewable Energy Credit: Fuel Cell maximum - $500/0.5kW. Fuel cells must have electricity-only generation efficiency greater than 50% and 0.5kW minimum.
Over $25 million in federal grants supporting fuel cell technologies. **1603 is set to expire 12/31/2011.**

First of its kind fuel cell deployments across multiple civilian and military agencies with third party financing.

U.S. Army Construction Engineering Research Lab is managing the installation & data collection.
Developed Interagency Action Plan - integrated plan for coordinating U.S. federal agency efforts hydrogen and fuel cells RDD&D

Held High-Level Interagency Task Force Meeting across 10 Agencies.

Goals
1. Strengthen and Accelerate Research and Development
2. Accelerate Development & Adoption of Codes, Standards & Safe Practices
3. Work with Industry to Validate Technologies under Real-World Conditions
4. Adopt Technologies in U.S. Government Operations
5. Track and Communicate Results

Developed Procurement Guide (ORNL)

Provides clear guidance on CHP technology – its benefits, ideal usage, and financing options.
DOE-EERE funding enabled >310 patents, ~30 commercial technologies, and >60 emerging technologies.

~$70M in DOE-EERE funding has led to nearly $200M in industry investment and revenues.

>310 PATENTS resulting from EERE-funded R&D:
- Includes technologies for hydrogen production and delivery, hydrogen storage, and fuel cells

Source: Pacific Northwest National Laboratory
Clean Energy Patent Growth Index\(^1\) shows that fuel cell patents lead in the clean energy field with nearly 1,000 fuel cell patents issued worldwide in 2010.

- 3x more than the second place holder, solar, which has just ~360 patents.
- Number of fuel cell patents grew > 57% in 2010.

\(^1\) 2010 Year in Review at: http://cepgi.typepad.com/heslin_rothenberg_farley/
Published more than 70 news articles in FY11 (including blogs, progress alerts and DOE FCT news alerts)

Communication and Outreach Activities include:

- Webinar Series:
  - Series of informational webinars led by FCT and partners on various topics including: Hydrogen Fuel Cells in your Area, Local Green Policies, Mobile Lighting
- MotorWeek: PBS to air a fuel cell episode in October 2011
- H₂ Student Design Contest: Registration closes November 15, 2011
- Portland Community College: Installed 1ˢᵗ of 38, 5KW units.
- New Awards: Nearly $7 Million - Fuel Cell and Hydrogen Storage Cost Analysis
- Jobs tool developed, ANL (Beta testing, this year)

Blogs Published to Energy.gov website include:

- Fuel Station of the Future
- Shuttle Launch

"These technologies are part of a broad portfolio that will create new American jobs, reduce carbon pollution, and increase our competitiveness in today's global clean energy economy."

Progress in low and zero Pt catalysts highlighted in Science

Hydrogen fuel cells providing critical backup power

Hydrogen power lights at the space shuttle launch
Challenge: Design a Combined Heat, Hydrogen and Power (CHHP) System for Your University Campus Using Local Resources

Sections: Contest addresses resource assessment, technical design, end use analysis, environmental analysis, economic analysis and business plan, as well as marketing and public education.

Outreach:
- 25,000++ stakeholders in the hydrogen industry
- 1000+ professors and students, incl. 50 top engineering schools in the U.S.

Timeline
November 4, 2011 – Webcast on Rules & Guidelines w/ CHHP Experts
November 15, 2011 – Abstract Deadline
June 3-7, 2012 – Winner presents at WHEC 2012 Conference in Toronto, CAN
New Phase I Topic:

- Two-phased topic release
  - Release 1 topics from DOE’s Science Programs
  - Release 2 topics from DOE’s Applied Programs

- Science Programs
  - Issued 8/1/2011
  - Closed 9/19/2011

- Applied Programs (*will include FCT topics*)
  - Pre-release topics on 11/1/2011 on SBIR website
  - FOA posted 11/28/2011 on FedConnect
  - *Applications due 1/19/2012*

New elements: LOI required and emphasis on commercialization plan
Partnerships & Collaboration

Federal Agencies
