Johnson Controls Inc.
“Domestic advanced battery industry creation project”

Eric Ellerman
Johnson Controls
5/15/2013

ARRAVT019

This presentation does not contain any proprietary, confidential, or otherwise restricted information
Johnson Controls: a global, $41 billion diversified company in the energy storage systems, building and automotive industries

**Automotive Experience**

A global leader in automotive seating, overhead systems, door and instrument panels, and interior electronics.

**Building Efficiency**

A leading provider of equipment, controls and services for heating, ventilating, air-conditioning, refrigeration, and security systems for buildings.

**Power Solutions**

Lead-acid automotive batteries and lithium-ion hybrid and electric battery systems that make vehicles more energy efficient.
Johnson Controls domestic advanced battery industry creation project overview

**Timeline**

- **11/2009**: Grant Award
- **09/2010**: Pack Assembly
- **03/2011**: Cell Validation
- **07/2011**: Cell Ship

**Budget**

- **Total project size**: $599.4M

  - Johnson Controls: $300.2M
  - DOE: $299.2M

**Barriers**

- Market demand vs. capacity and cost
- Fledging U.S. supply chain
- Significant investments in R&D required to mature the technology

**Partnerships**

- Entek Membranes
- Argonne National Laboratory
- Joint Center for Energy Storage Research (JCESR)
- National Renewable Energy Laboratory
- Penn State University, University of Wisconsin – Madison and University of Wisconsin – Milwaukee
Establish a domestic advanced battery industry scaled to be globally competitive

- Build a sustainable market demand
- Develop a sustainable business model
- Manufacture energy storage systems
- Create jobs
- Build a domestic supply chain
- Accelerate the charging infrastructure deployment
- Develop recycling technology and business model while leveraging mature recovery infrastructure
Johnson Controls is meeting the goals of ARRA and the DOE

American Reinvestment and Recovery Act (ARRA) Goals
- Create new jobs and save existing ones
- Spur economic activity and invest in long-term growth
- Foster unprecedented levels of accountability and transparency in government spending

DOE Vehicle Technologies Program Goals
- Develop energy efficient and environmentally friendly vehicle technology
- Use less petroleum
- Increase mobility
- Promote energy security
- Lower advanced vehicle technology cost and reduce impact on environment
Addressing market demand vs. capacity barriers

Issue

*Market demand for advanced energy vehicle batteries is lagging installed/planned manufacturing capacity*

Solution

Offer a portfolio of technology and energy storage system solutions to support market adoption over the powertrain spectrum. Continue to make investments in energy storage R&D to reduce cost and improve performance.

- Near term:
  - Start-Stop and Micro Hybrid vehicles will offer the best performance and economic value equation
  - xEV technology will continue to be demonstrated and proven in low volume applications

Takeaway

Consumer adoption will be paced by performance, cost and infrastructure availability. Johnson Controls is leveraging our position as a technology leader by offering a complete portfolio of products and solutions.
Addressing the fledgling domestic supply chain

Issue

Nearly all the batteries for hybrid electric vehicles and plug-in electric vehicles, along with the materials and equipment to manufacture them, are made in Pacific Rim countries.

Solution

- Developing a domestic supply base throughout the advanced battery value chain
- Giving first consideration to U.S.-sourced materials
- Recruiting foreign suppliers to locate in the U.S., for example Toda America and Soulbrain MI have located their operations in the United States to support the industry

Takeaway

- Johnson Controls, with the ARRA matching grant funding as a catalyst, is developing a domestic supply base. We are sourcing all major components of our cells domestically.
- Eighty-nine percent of our equipment, materials, and tooling has been with companies that source within the U.S.
Addressing the barriers to domestic technology development

**Issue**

*America needs to reestablish our position as the world leader in transferring innovation into commercially successful products that are made in the U.S.*

**Solution**

- Johnson Controls built and launched the first Li-ion battery manufacturing facility in the US in September 2010.
- Our plant is flexibly designed to accommodate new technologies and products.
- Continue to develop the technology development collaboration model between the National Labs, universities and private sector to drive technology improvements. Johnson Controls is a leader in this area with significant relationships and investments in U.S. universities and National Labs.

**Takeaway**

- The ARRA matching grant has knocked down the barrier to building manufacturing domestically. The matching grant solidified Johnson Controls’ decision to expand advanced battery production in the U.S. versus Europe or Asia.
Johnson Controls goals and accomplishments overview

 Investing in America

- We are making an investment in the U.S. to build an advanced energy industry
- Developing and bringing advanced products to market

 Investing in people

- We are hiring engineers, scientists, technicians, and an experienced manufacturing workforce in the U.S.

 Delivering successes

- We are building a domestic supply base, as well as anchoring foreign suppliers in the U.S.
- Our plant is producing of complete advanced battery systems – and exporting to Europe
- Funded an Endowed Chair in Energy Storage R&D at the University of Wisconsin and built world-class laboratories on campus. Strategically partnered with Argonne National Laboratory
- Largest energy storage technical center in North America located in Glendale, Wisconsin, with state-of-the-art equipment and leading scientists
Accomplishing Johnson Controls goals – manufacturing excellence

State-of-the-art equipment that delivers:
- Automotive quality product
- High volume capability
- Significantly reduced cost
- Reduced environmental impact
- Processing efficiency

Reducing costs
- Domestic production will allow us to reduce shipping and duty costs from our European plant
- Domestic sourcing
- Design optimization
- Manufacturing process optimization
- Johnson Controls operational excellence, Best Business Practices and continuous improvement
Accomplishing Johnson Controls’ goals – sustainability

Certified LEED® Gold factory
- Achieved a cost savings of 24.5% for improved energy efficiency over a conventional building
- Reduced its landscaping water usage by at least 50% and its plumbing fixture water usage by 40%
- Received an Innovation in Design credit for the recycled content of the building materials (34% by cost)

Cooling for free
- Our plant’s cooling towers relieve significant pressure from our facility’s chiller plant
- As a result, the plant will have more consistent operating costs throughout the year

Recovering heat
- Heat from the battery formation process is captured and used in other areas of battery manufacturing

Reclaiming what would have been wasted
- We have designed our processes to reclaim materials used in manufacturing to save time, cost and energy
Accomplishing Johnson Controls’ goals – employee safety

At Johnson Controls, maintaining a safe, clean and sustainable environment for our employees is our top priority. Our safety plan is explicit:

“Equipment must provide adequate protection from hazards or safety risks to the operators or to those who are working on or in the area during normal operation, standing alone or during its non-production functions (e.g., manual cycles, set up modes, re-work modes, etc.). Servicing and Maintenance for equipment must be user friendly, safe, and convenient. In order that these goals may be met, Johnson Controls has compiled this specification, which represents Johnson Controls’ interpretation of applicable standards and laws. Johnson Controls must authorize all deviations from this specification…”
Accomplishments towards ARRA goals

Employing people – high quality jobs are being created
- In the last quarter, this project has resulted in direct 167.6 FTE jobs in the U.S.
- The Holland, Michigan plant currently employs 124 workers. 320 permanent full time jobs will be created when at full capacity.

Spurring economic activity
- $264.3M has been spent on production equipment, materials, customer programs, and service suppliers

Growing for the long-term
- We are building a sustainable business model that does not rely on Government subsidies

Defining accountability
- Meeting all reporting requirements of the ARRA and the DOE
- Our program office proactively self monitors and self audits internal processes and procedures to ensure uncompromised integrity in the use of tax payer dollars
Accomplishments towards DOE Vehicle Technology goals

Energy efficient and environmentally friendly highway technology
- Vehicles powered by our Li-ion batteries, including Daimler, BMW, Mercedes, and Odyne produce fewer emissions and achieve better fuel economy than conventional internal combustion engines

Reduced petroleum consumption
- Our combination of HEVs, PHEVs, and EVs reduce or eliminate petroleum usage

Freedom of mobility
- Battery technology gains in cycle life and energy density are providing Americans with extended all-electric range vehicles to increase range confidence

Energy security
- Domestic advanced energy storage products improve energy security by reducing petroleum imports and reducing the competitive risk of a foreign battery cartel

Lower cost and reduce impact on environment
- Batteries manufactured at our facility are optimized for cradle-to-cradle product lifecycle, including recovery of key materials and recycling

Reduction in petroleum usage
- 30% • Hybrid
- 70% • Plug-in Hybrid
- 100% • Full-electric
Project status and milestones

Environmental Assessment
- Johnson Controls’ plant poses no threat to the environment around our plant and area of operations
- Finding of No Significant Impact (FONSI) was issued March 2010

Milestones

- Project Kickoff
- Prototype Assembly
- Pack Production
- Cell Production Ramp Up
- Scale Cell Production

Complete advanced battery systems are being produced in the U.S. -- powering vehicles on U.S. and European roads
Johnson Controls’ Collaborations and Partnerships

**Argonne National Laboratory**
- Service provider to Johnson Controls
- Collaborating on technology development outside of the VT Program
- Unmatched expertise in energy storage materials and systems research

**Entek Membranes**
- Sub-recipient to the award
- Leader in the industry, involved within the VT Program
- Entek provides state-of-the-art Li-ion battery separators
Johnson Controls’ Partnerships

- Our multi-million-dollar initiatives with the University of Wisconsin system include cutting-edge laboratories, an endowed chair in energy storage and graduate research fellowships.
- The collaboration is aimed at speeding commercial development of next-generation battery technologies and providing a strong pipeline of engineering students looking for careers in powering electric cars and developing energy storage for the power grid.
Future Work

Within the Fiscal Year we will continue:
- Cell and battery pack assembly at our Holland, Michigan plant
- Assembling complete battery packs with domestically produced cells
- Delivering market-derived solutions for transportation needs

In the remainder of the project
- Accelerate market demand to support the full capacity of our plant
- Continue to win production contracts to produce a full spectrum of Li-ion solutions
- Continue to make technology investments to maintain Johnson Controls’ leadership position
Summary

Johnson Controls will continue to be a leader by expanding the domestic advanced battery industry
- Building a significant manufacturing presence in Holland, Michigan
- Investing in our Wisconsin technology and engineering center
- Investing in University-led research and talent pipeline development
- Continuing to leverage strong National Lab strategic partnerships
- Expanding the domestic supply chain and using U.S.-produced components

Johnson Controls is meeting the goals of the ARRA and the DOE Vehicle Technologies programs
- In the past quarter, this project has resulted in the creation of 167 jobs
- We have spent $264.3M to deliver customer products, design and outfit our plant, and build our supply base, spurring economic activity
- We are committed to putting environmentally friendly vehicles into the market -- including our corporate fleet
- Our business is positioned for long-term growth
