MEGA TRENDS FOR FUTURE POWERTRAINS

ENERGY DIVERSITY

POWERTRAIN EFFICIENCY

ADVANCED PROPULSION TECHNOLOGY STRATEGY

DOWNSIZED TURBO GAS ENGINE

CHEVROLET CRUZE

1.4L TURBO ECOTEC

IMPROVING GASOLINE ENGINES

- Modular and Flexible Architectures
- Reduced Mass
- Improved Combustion Technology
- Integration of Leading-edge Technologies

Cam Phasing, Variable Valve Lift, Active Fuel Management

Port Deactivation with EGR

Spark Ignition Direct Injection

Downsized SIDI Turbo Boosting

HCCI – Homogeneous Charge Compression Ignition

CHEVROLET EQUINOX WITH 32 MPG CLASS-LEADING HIGHWAY FUEL ECONOMY

30% Fuel Economy Improvement with Powertrain and Vehicle Enablers

†† 2.4L SIDI L4 Ecotec
Engine Replaced 3.4L V6

†† 6-Speed Automatic with
Optimized Shift and
Clutch Control

†† Rack Electric Power
Steering

- †† Deceleration Fuel Cut-off
- †† Idle Speed Reduction
- †† Electronic Returnless Fuel System
- †† Aerodynamic Drag Reduction
- †† Regulated Voltage Control
- †† Optimized Tire Rolling Resistance

HOMOGENEOUS-CHARGE COMPRESSION-IGNITION (HCCI)

DIESEL ENGINES – ACHIEVING THE LOWEST EMISSIONS

Base Engine Technologies

- High Pressure Injection
- Lower Compression Ratios
- Higher Peak Cylinder Pressure

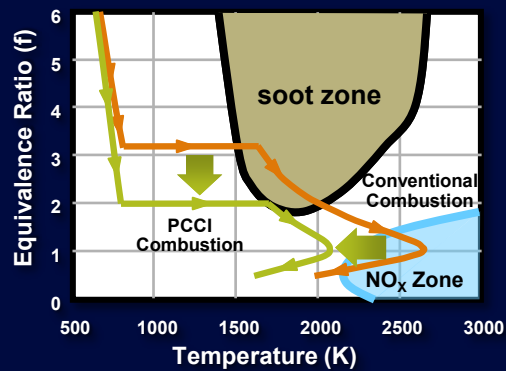

Advanced Boosting with Small Displacement

Cylinder Pressure Sensing

PCCI Combustion

Diesel Particulate Filter

NO_x Aftertreatment

DURAMAX 6.6L TURBO DIESEL

GMC SIERRA

6.6L TURBO V-8

GM ETHANOL VEHICLES

FLEXFUEL
E85 ETHANOL

Flexpower

OVER 5.5M VEHICLES WORLDWIDE AND 19 MODELS IN NORTH AMERICA

ENERGY DIVERSITY – ETHANOL

ENERGY DIVERSITY – CNG AND LPG

ELECTRIFICATION STRATEGY

PORTFOLIO OF SOLUTIONS FOR FULL RANGE OF VEHICLES THAT PROVIDE CUSTOMER CHOICE

Petroleum and Biofuels
(Conventional and Alternative Sources)

Electricity and Hydrogen
(Zero Emissions Energy Sources)

Mild Hybrid

Strong Hybrid

Plug-in Hybrid

Extended-Range Electric

Battery Electric

Fuel Cell Electric

Increasing Electrification

MILD HYBRID SYSTEM

- ↑ Up to 20% city fuel economy improvement
- ↑ 115 volt, 15kW system
- ↑ Midsize vehicles
- ↑ North America and Asia

2-MODE RWD HYBRIDS

2-MODE RWD HYBRIDS

- ¶ Up to 40% city fuel economy improvement
- ¶ City fuel economy equal to 4-cylinder sedan
- ¶ Tow up to 6,100 pounds
- ¶ Only full hybrid for full-size trucks and SUVs

PLUG-IN 2-MODE FWD HYBRID

- ¶ Front-wheel-drive architecture
- ¶ Active program under development for production
- ¶ Beginning in 2012

ELECTRIC VEHICLE WITH RANGE-EXTENDER

25-50 Miles
Battery Electric
Drive

+

Hundreds of
Miles Extended-
Range Driving

LITHIUM-ION BATTERY

- ¶ 16-kWh battery pack
- ¶ High energy, high power in minimized package
- ¶ 8-year/100,000-mile warranty

VOLT

Engine Generator

Lithium-Ion Battery

111 kW Electric Drive Unit

Charge Port

CHARGING AND INFRASTRUCTURE

POWERTRAIN ELECTRIFICATION

ELECTRIC MOTORS POWER CONTROL

BATTERIES

FUEL CELLS

GLOBAL BATTERY SYSTEMS LAB

PROJECT DRIVEWAY

PRODUCTION-INTENT
FUEL CELL SYSTEM

6,500
EVERYDAY DRIVERS

1,700,000
MILES LOGGED

ENERGY DIVERSITY AND POWERTRAIN EFFICIENCY

- ¶ Future powertrains must be driven by both improved efficiency and energy diversity
- ¶ Ethanol is the best near-term option for energy diversity
- ¶ CNG and hydrogen will increase in importance over time
- ¶ Electrification improves efficiency and offers the potential for energy diversity, while providing a fun-to-drive car with new customer features
- ¶ There is no silver bullet ... the customer will ultimately choose the technology providing the most value

GM ROAD-LAB-MATH (RLM) STRATEGY

- ¶ Fundamental strategy to achieve:
 - Higher-quality design
 - Reduced structural cost
 - Faster product development
- ¶ Enable first-time capable designs
- ¶ Explore a range of what-if scenarios
- ¶ Minimize testing

OPTICAL DIAGNOSTICS AND CFD ANALYSIS

In-Cylinder Imaging

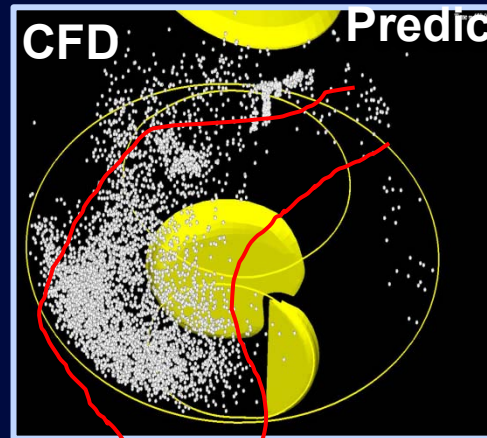

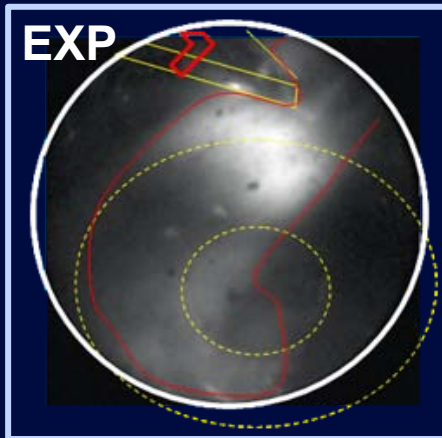

Spray Measurements

CFD Models Development

Improved In-Cylinder Predictions

MULTIDIMENSIONAL NUMERICAL SIMULATION

SPRAY, IGNITION, COMBUSTION, AND EMISSION MODELS

EASAT: ENGINE & AFTERTREATMENT SYSTEM ANALYSIS TOOLS

PREDICT TAILPIPE EMISSIONS AND FUEL CONSUMPTION

Evaluate Control Strategies

Do Preliminary Calibration

Controller

- Single Variable (PID)
- Multiple Variable (Model based)

Vehicle

- GT-Drive
- HPSP

Complete Drive Cycle Simulation

Optimize System Design (Engine & AT)

Engine/AT System Architecture

Engine

- GT-Power
- WAVE

Aftertreatment

- 3W C
- DO
- DPF
- SC R

CO, HC, NOx, PM

- LNT

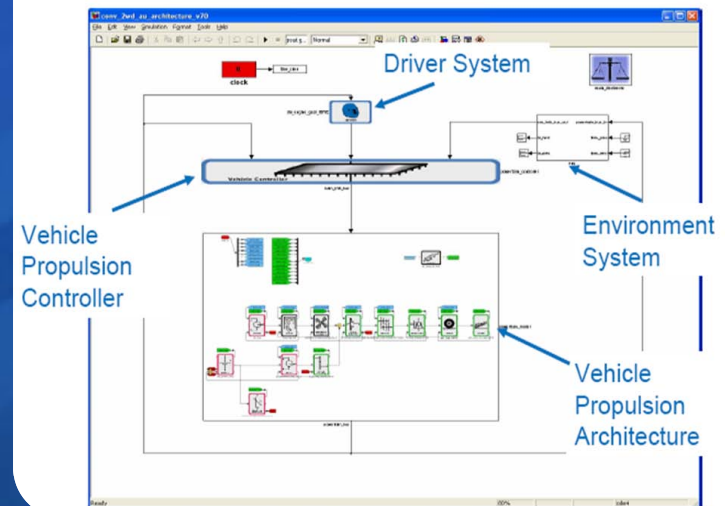

- † Powertrain Model Architecture CRADA
- † Argonne National Lab and General Motors
- † Plug-and-play environment and architecture supports powertrain control systems design, analysis, and development
- † Currently being rolled out as the production tool for GM controls algorithms development

Top-Level Model Architecture

WHAT IS THE FUTURE?

High-speed computing grid needed for:

- ¶ Large (CFD) system simulation
- ¶ High-fidelity models
- ¶ Predictive combustion engine data before actual hardware is available
- ¶ Multi-controller simulation
- ¶ Optimization studies, limited by current computing throughput

EXTERNAL COLLABORATIONS

¶ National Labs

- Sandia – Combustion research
- Oak Ridge – Diesel particulate filter and ethanol degradation CRADAs
- Pacific Northwest – Urea SCR CRADA
- Argonne – Plug-and-play model architecture
- DOE initiative on predictive numerical simulation

¶ University network

- Collaborative Research Labs: U. Michigan, U. Wisconsin
- Shanghai Jiao Tong U., Tech. U. Darmstadt, Penn State
