FE Docket No. 14-179-LNG

**MOTION FOR LEAVE TO INTERVENE AND PROTEST
(by Foundation for a Green Future, Inc.)**

Pursuant to 10 C.F.R. 590.303, MY TOWN Pipeline awareness (MTPE) files this motion to intervene in the above-captioned docket. In opposition, MTPE states as follows:

I. COMMUNICATIONS

Any communications regarding this pleading should be addressed to:

<i>Name:</i>	<i>Dr. Karen L. Weber</i>
<i>Organization:</i>	<i>Foundation for a Green Future, Inc.</i>
<i>Address</i>	<i>4 Archdale Road</i>
<i>City, State ZIP</i>	<i>Boston, MA 02131</i>
<i>(xxx) xxx-xxxx</i>	<i>617-477-4840</i>
<i>myemail@mydomain.com</i>	<i>karen@foundationforagreenfuture.org</i>

II. BACKGROUND

On October 24, 2014, Pieridae Energy (USA) Ltd. (“Pieridae”) filed an application with the Department of Energy’s Office of Fossil Energy (“DOE/FE”) seeking a long-term multi-contract authorization to export domestically produced liquefied natural gas (“LNG”) up to the equivalent of 292 billion cubic feet (“Bcf”) of natural gas per year to non-Free Trade Agreement (“nonFTA”) countries, via export into Canada via pipeline and re-exporting some or all of that gas as LNG from a proposed terminal in Goldboro, Nova Scotia.

III. PROTEST AND INTERVENTION

[my organization is a ___ what, who you are, who you represent or what you do _____.]

My organization, *Foundation for a Green Future, Inc.* is a Boston-based nonprofit that educates and advocates for a healthy green planet. It is currently serving as the fiscal agent for the Committee to Stop West Roxbury Pipeline, a proposed Spectra Energy project that creates high-stake risks for the adjacent Boston community of West Roxbury, MA as well as for Greater Boston. We are concerned that the Pieridae Energy application along with the proposals of Spectra Energy directly oppose the national and state standards for reducing greenhouse gas emissions, interfere with our community’s health and safety, and must be halted until proper consideration is given to our city’s, state’s and nation’s energy policies.

For the last several months our group has been working to raise awareness of the Spectra Energy pipeline expansion projects and their potential to harm the local environment, increase the long term use of fossil fuels, assess ratepayers for the costs of pipeline construction, and send natural gas overseas instead of using it for domestic purposes. It is clear upon reading the Pieridae application (page 20 & Appendix E) that its export plans would likely depend on the completion of the Kinder Morgan Northeast Energy Direct (“NED”) project and/or the alternative plan, the Access Northeast and Atlantic Bridge by Spectra Energy.

Pieridae's application must acknowledge the fact that current pipeline capacity from the Marcellus shale to Goldboro is NOT sufficient for its plan.

Under the National Environmental Policy Act ("NEPA") the environmental impact of a new pipeline construction must be considered. In particular, NED is not the expansion of an existing pipeline on an existing right of way; it is a greenfield project with a proposed capacity of up to 2.2 billion cubic feet per day. The new route for this project announced on December 8, 2014 would create a brand new pipeline right of way that would impinge upon the rights of thousands of homeowners and landowners to enjoy their properties. It would cross conservation lands and forests, the water supplies of several towns in this area, and it would endanger the safety of residents due to the proximity of the route for this high-pressure pipeline to highly developed neighborhoods, other utility easements, active quarries, and sewer lines that often undergo maintenance and construction.

Approval of the Pieridae export plan would not only drive the development of large pipelines, but it could result in the depletion of natural gas winter storage and peak supply that are critical to all of New England. In 2014, natural gas “inventories fell 1,000 Bcf below the five-year average in mid-April,” according to EIA (<http://www.eia.gov/forecasts/steo/report/natgas.cfm>, accessed 2/8/15). That reduction in inventory was largely responsible for high spot prices for gas in January through October of 2014. Exporting 292 billion cubic feet of natural gas from this region would result in lower inventories of gas and thus, would contribute to higher New England gas prices than if these exports are not allowed.

Because *Foundation for a Green Future, Inc.* represents natural gas consumers now served by M&NE, and because we represent individuals who are located in the town(s) of West Roxbury, Roslindale, and the rest of the City of Boston along the proposed route of a Spectra Energy pipeline, referenced in the Pieridae application (Appendix E-3, E-4) as a possible source for gas, [my organization] thus has a direct and immediate interest in this docket which cannot be adequately protected by any other party. Accordingly, *Foundation for a Green Future, Inc.* should be permitted to intervene in this docket with full rights as a party.

IV. CONCLUSION

For the reasons stated above, *Foundation for a Green Future, Inc.* respectfully requests that DOE/FE grant this timely motion to intervene and that *Foundation for a Green Future, Inc.* be accorded fully party status in any proceedings held by DOE/FE in this docket.

Respectfully submitted,

Dr. Karen L. Weber
Executive Director
Foundation for a Green Future, Inc.
