To Whom It May Concern,

As a voter and tax paying citizen of the United States of America, I want to make my voice heard **against** the authorization of Export Contracts for Natural Gas. This proposal is definitely NOT in the public interest of the majority of the citizens in this country. Increased domestic prices of gas will force the average consumer to forego purchases of products other than those needed for basic survival thereby weakening an already weakened economy. Even the 1% of supporters who hope to increase their profits from this venture have a lot to lose from the adverse environmental impact experienced by increased releases of methane gas as the fossil fuel industry expands.

The expansion of the fossil fuel industry is totally RETRO. Our country should be taking a lesson from those in China who know where the future is going and invest in alternative energy sources that will not only save our world for future generations but also will create jobs that will last beyond the next 10 to 15 years. To be so short sighted as to promote increased gas distribution for CORPORATE gain alone is a true tragedy.

Thank you for listening.
