I am writing this hurriedly, because we were not given notice in time for proper response. This whole deal smacks of a scam when citizens are not informed and given proper opportunity to respond. Our rights are being trampled in order to give corporations large profits. Gas will be exported because the fossil fuel corporations can make many times more profit on foreign sales. It is certainly not a situation for the use of eminent domain on private land.

Although you folks may be doubters, the facts of climate change are now established and you are just as responsible as any other fellow citizen of this planet. Methane is 88% more dangerous than coal (Howarth, et als) in the first ten years. How can you justify allowing the production and shipment of natural gas, when you already know this. Do what is right and do not expedite this secret trade deal. Or accept the contempt of your grandchildren.
