This document, concerning residential water heaters is an action issued by the Department of Energy. Though it is not intended or expected, should any discrepancy occur between the document posted here and the document published in the Federal Register, the Federal Register publication controls. This document is being made available through the Internet solely as a means to facilitate the public’s access to this document.

ACTION: Proposed rule; withdrawal.

SUMMARY: The U.S. Department of Energy (DOE) withdraws a proposed rule published in the Federal Register on February 26, 2013 that proposed to establish a waiver process to allow the manufacture and sale of certain large-volume (>55 gallon) electric storage water heaters under 1-year waivers granted by DOE, provided that a specific set of features are included and conditions are met to ensure their use only in residences enrolled in utility electric thermal storage (ETS) programs.
DATES: The proposed rule published on February 26, 2013 at 78 FR 12969 is withdrawn as of [INSERT DATE OF PUBLICATION IN THE FEDERAL REGISTER].

SUPPLEMENTARY INFORMATION:

I. Authority

Title III, Part B\(^1\) of the Energy Policy and Conservation Act of 1975 ("EPCA" or "the Act"), Pub. L. 94-163 (42 U.S.C. 6291-6309, as codified) established the Energy

\(^{1}\) For editorial reasons, upon codification in the U.S. Code, Part B was redesignated as Part A.
Conservation Program for Consumer Products Other Than Automobiles. These products include residential water heaters (RWH), the subject of this document. (42 U.S.C. 6292(a)(4))

II. Background

The energy conservation standards for residential water heaters adopted in the April 2010 final rule will apply to products manufactured on or after April 16, 2015. 75 FR 20234 (April 16, 2010). The amended energy conservation standards consist of minimum energy factors (EF) that vary based on the rated storage volume of the water heater, the type of energy it uses (i.e., gas, oil, or electricity), and whether it is a storage, 

---

2 All references to EPCA in this document refer to the statute as amended through the American Energy Manufacturing Technical Corrections Act (AEMTCA), Pub. L. 112-210 (Dec. 18, 2012).
3 Energy factor is a measure of overall water heater efficiency that accounts for efficiency during active, standby, and cyclical operation.
Of particular relevance to this notice, electric water heaters with a rated storage volume above 55 gallons (referred to hereinafter as “large-volume” electric storage water heaters) will be required to have an energy factor of at least $2.057 - (0.00113 \times \text{Rated Storage Volume in gallons})$. Such a level is currently achievable only by using heat pump water heater technology and cannot be achieved in electric water heaters that rely solely on electric resistance elements.

Subsequent to the publication of the April 2010 final rule, several stakeholders indicated to DOE their concerns about the interaction of the amended standards in the April 2010 final rule and the use of large-volume electric storage water heaters in utility ETS programs. To gather additional information on the impact of the amended standard established in the April 2010 final rule on ETS programs that use large-volume electric storage water heaters, DOE issued a request for information (RFI) and received numerous additional comments on these topics. 77 FR 35299 (June 13, 2012). After considering comments submitted by interested parties, DOE published a notice of proposed rulemaking (NOPR) proposing to establish a waiver process to allow any manufacturer, utility, or a combination of the two to request a waiver granting an exemption from the amended energy conservation standards established in the April 2010 final rule for certain large-volume electric storage water heaters used in an ETS program. 78 FR 12969 (Feb. 26, 2013). As proposed, each waiver would have allowed manufacturers to produce, for a 1-year period, a limited number of large-volume electric storage water heaters that would not otherwise meet the April 2010 amended standard levels, provided that a specific set of features are included and conditions are met to ensure their use.
exclusively in utility ETS programs. More information on DOE’s waiver proposal and stakeholder feedback can be found in the rulemaking docket.4

III. Discussion

By this document, DOE withdraws its February 26, 2013 NOPR. DOE commissioned a study to examine the capability of large-capacity water heaters, both resistance and heat pump, to support ETS programs and found both water heater types worked for such programs. For additional discussion of the capability of using large-volume electric storage water heaters that meet the April 2010 amended standard levels to support utility ETS programs, see the following reports:

IV. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this withdrawal.

Issued in Washington, DC, on March 26, 2015.
