---

I strongly oppose the pipeline for several reasons. First, its route is far too close to many of the most ecologically vulnerable parts of Arkansas, including the Arkansas River and the Buffalo River Watershed. Second, the benefit to Arkansans, and the companies involved is insignificant when compared to the potential damage of a spill. And third, Arkansas is "the natural state", allowing this pipeline to be permitted will only encourage further development of this non-renewable energy business when Arkansas is working strongly to go in the opposite direction.

Thank you for your consideration and please do not allow this pipeline to move forward.

David James
