**Subject:** Power line across Arkansas  
**Date:** Thursday, July 02, 2015 8:07:48 PM

---

Has everything possible been done to minimize imminent domain?  
Why can the power not be "wheeled" on existing grids?  
What is Entergy, Southwest Power Pool and MISO position on this proposal?  
Is this only about Carbon Credits for Tennessee?

Why was the Arkansas connection an "after the fact" idea?

Make better use of existing right of ways, transmission grids and sharing power systems.

I am not against wind power only corporate greed at the cost of property owners and rate payers.

Living in the good old days, now.
