DOE

I writing to express my concerns on this powerline.where I know green energy is need but I do not believe this is the way to go about doing it. From my reading of 1222 clean line doesn't not qualify for this section. These are uncharted waters and I don't think that the American people should have to deal with this case before more thought is put into who what when and where this section 1222 should be used. In my opinion no private company should ever be granted the right of enimat domain for private gain. If this project goes through it will kick the door wide open for many other companies to do the same and then owning land will mean nothing. Why would one want to work for a piece of land pay for it pay taxes every year on n it just to have it taken away whenever by whomever. So I urge you to decline this PowerLine project.
