This document and all of its content are unclassified. All Classification Markings are for training and/or example purposes only.
CMPC Marking Resource

Examples of Acceptably Marked

Classified Matter

January 2015

Prepared for U.S. Department of Energy
Office of Environment, Health, Safety and Security
Office of Security Policy
A strong and cohesive information security program is integral to national security. The U.S. Government requires certain information to be maintained in confidence to protect our citizens, democratic institutions, and activities within the international security community.

Marking notifies holders of classified matter of the protection requirements for the information. Markings and designations serve two primary purposes:

- Alert holders to the presence of classified information.
- Warn holders of special access or safeguarding requirements.

This resource was developed to assist Federal and contractor employees by providing examples of acceptably marked classified matter. Although examples of current or historical markings may be included, this is not a comprehensive source for all possible marking of classified matter.

Nothing in this document is meant to establish, imply, or mandate requirements. These are reference examples only. U.S. Department of Energy (DOE) and national directives take precedence over the examples in this document if there are any discrepancies at any time.

How to Use This Document

Examples illustrate markings for matter that contains classified information. Note that page markings, with the exception of top and bottom and front and back markings, are no longer required to be at specific locations on the page. More than one example may be required to fulfill all requirements. References and links for DOE and national directives are provided on the following page.

The examples exhibit markings that achieve minimum national and departmental requirements, but are for example purposes only. Facilities may have procedures and practices for marking that vary from this handbook; e.g., use of alternate stamps that include all required information. If you have questions, consult your site’s Classification or Security Office.

This resource is not a substitute for training in DOE document and data control. In addition, specialized training and formal designation is required in order to derivatively classify or declassify matter.

This resource document contains no classified information. The security classification markings, declassification instructions, and warning notices are for illustration purposes only.

1.1.5 Marking Equipment/Parts

1.2 Unclassified Controlled Nuclear Information

Appendix A EQUIVALENT FOREIGN SECURITY CLASSIFICATIONS

Appendix B Guidelines for Marking NSI Email Messages on a Classified Network.
1.0 MARKING EXAMPLES

1.1 Classified Information

1.1.1 Basic Marking Examples

Classifier marking must be placed on “first page” of the document, whether the cover page, title page, or first page of text and should be placed in the lower left corner.

Derivative Declassifier Review Stamp should be close to NSI Classifier Marking, preferably above it, but as close as possible.

Classification Marking Layout for Derivatively Classified NSI Documents

Additional required markings on page 2.
Overall Classification Level

Originator Information  
(name of organization and address)

Date

(Classification Level/Caveat*) Title/Subject
Classification level and caveat (if applicable) must always be identified; the use of classified titles is strongly discouraged.

NSI portion marked

(Classification Level/Caveat*) Paragraph 1
(Classification Level/Caveat*) Paragraph 2

Caveat (if applicable) NSI
Classifier Marking

Declassify on: DECEMBER 30, 2021
NOTE: A marking matrix may be used when classified matter contains a mix of information at various levels and categories that causes the document to be marked at an overall level and category higher than the protection level required for any of the individual portions. This would allow an individual with a lower access level, such as an “L” cleared employee, to be given access to a document that he or she might not otherwise have been authorized access to.

Mouse Creek, AR  67890

December 30, 2011

NOTE: Although draft/working papers are not required to be portion marked, the subject/title is considered classified unless determined to be unclassified and marked accordingly. Date location is not mandatory. The date may be located in another location on this page (i.e., top, bottom, etc.).
Folders containing classified matter, when removed from secure storage repositories, are conspicuously marked to indicate the highest level of classified information contained in the folder. A coversheet could also be affixed to the folder.

The folder is unclassified when it no longer contains classified material.
Top Secret, Secret, and Confidential Cover Sheets
C/FGI-MOD coversheet (DOE F 471.2) is completed and attached to foreign government documents that are protected at a level lower than U.S. Confidential.

As defined by Executive Order 13526, Section 6.1(S), “Foreign Government Information” means:
1. Information provided to the U.S. Government by a foreign government or governments, an international organization of governments, or any element thereof, with the expectation that the information, the source of the information, or both are to be held in confidence;
2. Information produced by the United States pursuant to or as a result of a joint arrangement with a foreign government or governments, or an international organization of governments, or any element thereof, requiring that the information, the arrangement, or both, are to be held in confidence; or
3. Information received and treated as “Foreign Government Information” under the terms of a predecessor order.

The attached document(s) contains Foreign Government Information (FGI), as defined by Executive Order 13526, “Classified National Security Information,” that the foreign government protects at a level lower than U.S. CONFIDENTIAL.

Access to the attached information does not require an access authorization or personnel security clearance. However, access to this information must only be granted to persons with an established need-to-know and whose official duties require access. This information must not be disclosed to a third party government, individual, group, or organization not involved in the applicable agreement or treaty without the expressed, written permission from the originator.

This document(s) must be transmitted using approved U.S. classified methods unless this requirement is waived by the owning foreign government. It must be destroyed as required for a U.S. CONFIDENTIAL classified document.

When not in use, this document must be stored in a locked receptacle (e.g., file cabinet, desk, bookcase) that is accessible only by persons who have a need to know the information to perform their official duties to ensure protection against unauthorized disclosure or access by unauthorized personnel.

This Cover Sheet May Be Applied to All Qualified FGI Documents While Under U.S. Control in U.S. Facilities.

C/FGI-MOD

CMPC Marking Resource: Examples of Acceptably Marked Classified Matter

January 2015
1.1.5 Marking Equipment/Parts

MARKINGS ARE FOR EXAMPLE PURPOSES ONLY

Classified Equipment Marking
Example 1. Marking Parts

Overall markings are stamped, printed, etched, written, engraved, painted, or affixed by means of a tag, sticker, decal, or similar device on classified material other than documents, and on containers of such material, if possible. If marking the material or container is not practical, written notification of the markings are furnished to recipients.

Caution. Before initiating any new marking policies, it is necessary to coordinate with the production engineers. War reserve and configuration control requirements mandate strict control over what is done to specific materials – markings cannot violate these rules. Any alternative markings under consideration must be compatible with the material being marked.
Example 2. Marking Parts

NOTE: Additional classification markings (e.g., classifier information) are furnished to those who have access to the parts if the markings cannot be placed on the equipment.
Example 3. Marking Containers

Containers are clearly marked when the parts are unable to be marked.
1.2 Unclassified Controlled Nuclear Information

Declassified Document Still Containing UCNI

Classified documents that also contain controlled information do not have the corresponding control markings unless they are portion marked. Therefore, when such documents are reviewed for declassification, any controlled information is identified at that time and marked accordingly. A declassified document that contains UCNI must be re-marked as UCNI after the classification markings are lined out.

Guidelines for Marking NSI Email Messages On a Classified Network

U.S. Department of Energy
Office of Classification
Office of Chief Information Officer
Office of Security Policy

Version January 2015
PURPOSE

The purpose of these guidelines is to provide information on proper marking procedures for NSI email sent on a classified network.

GOVERNING AUTHORITY

32 CFR Part 2001

Classified National Security Information: Final Rule

Nothing in these guidelines is intended to establish, imply, or mandate new requirements.
Marking Unclassified, NSI, or TFNI Email on a Classified System

- Email Containing Unclassified Information
- Email Containing National Security Information
- Email Containing Only Transclassified Foreign Nuclear Information
- Email Containing National Security Information and Transclassified Foreign Nuclear Information
- Email Classified Using Multiple Sources
- Unclassified Email with a Classified Attachment
- Classified Email with a Classified Attachment
- String of Classified Emails
- An Originally Classified Email
(U) in subject line

"UNCLASSIFIED" marking at top and bottom

To: Amy Basil
From: Eve Ng
Date:
Cc:
Subject: (U) Marking an Unclassified Email

UNCLASSIFIED

This is an example of marking an unclassified email.

The subject must be marked "(U)" at the beginning of the subject line.

The word "UNCLASSIFIED" must be included at the very beginning of the text of the message and at the bottom of the message after the signature block.

Eve Ng
Security Specialist
Office of Classification

UNCLASSIFIED

Markings are for example purposes only
MARKING EXAMPLE FOR A DERIVATIVELY CLASSIFIED EMAIL CONTAINING NATIONAL SECURITY INFORMATION (NSI)

Classification of subject line

Overall classification level of email at top and bottom

Paragraphs are portion marked

Classification Authority Block (3 Line) (Can be linear)

Special control marking

To: Amy Basil
From: Eve Ng
Date:
Cc: 
Subject: (U) Marking an Email Derivatively Classified as NSI

SECRET

(U) This is an example of marking an email that is derivatively classified as containing National Security Information.

(S) The subject line must be marked with the classification level of the information contained in the subject line, not the classification level of information contained in the overall email. In this example, the subject is unclassified.

(C) The overall classification level of the email must be included at the beginning of the text of the email and at the bottom after the special control marking.

(C) Since this email contains only NSI, each portion must be marked at its beginning with the highest classification level of the information contained in that portion.

(U) The 3-line classification authority block follows the signature block and must include all of the required information. It can be in block or linear form.

(U) The special control marking is placed after the classification authority block and before the overall classification level.

MARKING EXAMPLE FOR AN EMAIL CONTAINING ONLY TRANSCLASSIFIED FOREIGN NUCLEAR INFORMATION (TFNI)

Classification of subject line

Overall classification level and category of email at top and bottom

TFNI, like NSI, must be portion marked

Classification Authority Block (3 line) (Can be linear)

TFNI is not automatically declassified

To: Amy Basil
From: Eve Ng
Date:
Cc:
Subject: (U) Marking an Email Classified as TFNI

SECRET/TRANSCLASSIFIED FOREIGN NUCLEAR INFORMATION

(C/TFNI) This is an example of marking an email containing Transclassified Foreign Nuclear Information.

(U) The subject line must be marked with the classification level and category of the information contained in the subject line, not the classification level and category of information contained in the overall email. In this example, the subject is unclassified.

(C/TFNI) The overall classification level and category of the email must be included at the beginning of the text of the email and at the bottom after the classification authority block.

(U) Since this email contains TFNI but not RD or FRD, each portion of the email must be marked at its beginning with the highest classification level and category of the information contained in that portion.

(SECRET/TRANSCLASSIFIED FOREIGN NUCLEAR INFORMATION)

Markings are for example purposes only
MARKING EXAMPLE FOR AN EMAIL CONTAINING NSI AND TFNI

Classification of subject line

Overall classification level and category of email at top and bottom

Paragraphs are portion marked

Classification Authority Block (3 line) (Can be linear)

TFNI is not automatically declassified

Special control marking

Source list for NSI
MARKING EXAMPLE FOR AN EMAIL CLASSIFIED USING MULTIPLE SOURCES

Classification of subject line

Overall classification level of email at top and bottom

Paragraphs are portion marked

Classification Authority Block (3 line)

“Derived From” is “Multiple Sources”

“Declassify On” reflects longest duration of classification from all sources

Special control marking

Source list for NSI

MARKINGS:

SECRET

(U) This is an example of marking an email that was classified using multiple sources.

(S) The subject line must be marked with the classification level (and category if RD or FRD) of the information contained in the subject line, not the classification level of information contained in the overall email. In this example, the subject is unclassified.

(S) The overall classification level (and category if RD or FRD) of the email must be included at the beginning of the text of the email and at the bottom after the source list.

(C) Since this email contains only NSI, each portion of the document must be marked at its beginning with the highest classification level of the information contained in that portion.

(U) The appropriate classification authority block follows the signature block and must include all of the required information. It can be in block or linear form.

(U) When the classification of an email is based on multiple sources, the entry for the “Derived From” line of the classification authority block is “Multiple Sources.” For an email containing only NSI like this one, the entry on the “Declassify On” line reflects the longest duration of classification from all these sources.

(U) Since this email contains only NSI, the special control marking is placed after the classification authority block.

(U) A list of the source documents must be placed at the bottom of the email immediately before the overall classification level (and category if RD or FRD).

Eve Ng
Security Specialist
Office of Classification

Classification of Eve Ng, Security Specialist
Derived from: Multiple Sources
Declassify on: 20230405

Derivative Declassifier review required prior to declassification

Source Document List:
CG-XX-1, 8/10/10, DOE CC
CG-ZZ-3, 1/12/20, DOE CC

SECRET

Markings are for example purposes only
MARKING EXAMPLE FOR AN UNCLASSIFIED EMAIL TRANSMITTING A CLASSIFIED ATTACHMENT

Classification of subject line

Overall classification level of email and attachment at top and bottom. Classification of email and Attachment at the beginning of text

Since the email is unclassified, it requires no portion marking or classification authority block

Classification level and category (if RD/FRD) of the attachment must be indicated and the attachment must be marked correctly as a stand-alone document

Classification level and category (if RD/FRD): SECRET

Attachment contains SECRET

When separated from attachment, this email is unclassified.

This is an example of marking an email that contains only unclassified information but transmits a classified attachment.

The subject line must be marked with the classification level and category of the information contained in the subject line, not the classification level and category of information contained in the overall email or attachment. In this example, the subject is unclassified.

The overall classification level of the email itself and its attachments must be included at the beginning of the text and at the bottom of the email. Immediately following the overall classification level at the beginning of the text, the highest level of the attachment(s) must be identified and followed by this statement: “When separated from attachment, this email is unclassified.”

Wherever the attachment is shown (at the bottom of the email, elsewhere in the email, or in the attachment line), the classification level of the information contained in the attachment must be indicated (e.g., Secret Attachment).

The attachment must be marked correctly as a stand-alone NSI document.

Since this email is unclassified, it is not portion marked and needs no classification authority block.

Eve Ng
Security Specialist
Office of Classification

SECRET

(U) Attachment Title

Markings are for example purposes only
MARKING EXAMPLE FOR A CLASSIFIED EMAIL TRANSMITTING A CLASSIFIED ATTACHMENT

Classification of subject line

Overall classification level and category of email and attachment at top and bottom. Classification of email and Attachment at the beginning of text

Paragraphs are portion marked (email is NSI)

Classification Authority Block (3 line) – Refers to email

“Declassify On” date refers to the email, not the attachment

Special control marking

Classification Level and category (if RD/FRD) of the attachment must be indicated

Markings are for example purposes only
MARKING EXAMPLE FOR A STRING OF CLASSIFIED EMAILS

If you reply to or forward an email, you are responsible for the entire string and must review and classify appropriately.

The original email was Confidential.
The responder addition upgraded it to Secret.
The new overall classification level is placed at the beginning and end of the entire string.

The Derivative Classifier marking is placed just before the overall level at the end of the string.

“Derived From” should include all sources for the entire string.

“Declassify On” reflects longest duration of classification from all sources.

Do not repeat special control markings.

---

**SECRET**

[(S) If you respond to or forward a classified email, you must review and classify the entire string, considering each section in the context of the entire email for classification.]

[(S) The overall classification level of the string is included at the beginning of the text of your email and at the end of the entire string of emails. In this example, the first email is Confidential and the second is Secret, so the string has an overall classification level of Secret.]

[(C) The classification authority block is placed at the end of the string just before the overall classification level.]

[(C) Do not repeat the special control marking for your reply. However, you must carry forward any statements concerning classified attachments to the email string (e.g., “Attachment contains SECRET.” When separated from attachment, this email is...” This should be placed at the top of the email string and below the overall classification level.]

[(U) For your classification authority block, the “Derived From” line should include all sources used to classify the entire email string. At a minimum, this should include any guide used to make your classification determination and any of the previous email. If a source from the previous email is used, this may be noted with “and email source.” If there is a source list, it should be included at the end of the email string above the overall classification. The “Declassify On” line must reflect the longest duration of classification from all the sources for the entire string.]

---

**CONFIDENTIAL**

[(C) The initial email is marked according to the classification of the information contained in the email. This email contains Confidential NS.

Classified By: Eve Ng, Security Specialist
Derived From: CC-XX-1, 9/11/2011, DOE QC
Classify On: 2030/05
Preventive Declassifier review required prior to declassification

CONFIDENTIAL

Classified By: Amy Basl, Security Specialist, NS-61
Derived From: CC-XX-1, 9/11/2011, DOE QC and email above
Declassify On: 2030/023

SECRET

Markings are for example purposes only.
MARKING EXAMPLE FOR AN ORIGINAL CLASSIFIED EMAIL CONTAINING NSI

Classification of subject line

Overall classification level of email and attachment at top and bottom

Classification of email and attachment at the beginning of text

Since the email is NSI, portion marking is required

“Classified by” must contain classifier’s position or personal identifier

The Original Classifier must establish a specific date or event for declassification

Special control marking

NOTE: This example is included for completeness. Original classification should only be done by a Federal employee with original classification authority whose training is up to date.
Marking Classified E-mail

Subject: (U) Example of a Classified e-Mail

SECRET

(U) This is an example of how to properly mark a classified e-mail.

(S) An e-mail transmitted on or prepared for transmission on classified systems or networks shall have the overall classification displayed at the top and bottom of the body of each message. The overall classification shall reflect the classification of the header and body of the message to include the subject line, the text, attachments, included messages, signature block (if it is classified), and any other information conveyed in the body of the e-mail.

(S) Classified e-mail shall be portion marked to reflect the highest level of information contained in that portion.

(U) Subject lines shall be portion marked to reflect the sensitivity of the information in the subject line itself and shall not reflect any classification markings for the e-mail content or attachments. Subject lines and titles shall be portion marked before the subject or title.

(U) The classification authority block shall be placed after the signature block, but before the overall classification.

SIGNATURE BLOCK

Classified by: John Smith, Program Analyst
Derived from: Memo dated June 21, 2010, Subj: Classification Markings
Declassify on: June 21, 2015

SECRET

Classification marking of title of attachment
NOTE: This is the classification of the title of the attachment, and not the classification of the file itself. Most titles should be unclassified, but this example shows an attachment with a classified title.

Portion Mark Overall classification of the e-mail to include attachments

Include Classification authority block

Markings are for example purposes only
E-Mail Messages

E-mail transmitted on or prepared for transmission on classified systems or networks shall display the banner line (classification level and category if RD or FRD) at the top and bottom of the body of each message. A single linear text string (same as banner line) showing the overall classification, to include dissemination and control markings, shall be included as the first line of text and at the end of the body of the message after the signature block. (see Figure above).

The banner marking for the e-mail shall reflect the classification of the header and body of the message. This includes the subject line, the text of the e-mail, any classified signature block, attachments, included messages, and any other information conveyed in the body of the e-mail.

Classified NSI e-mail shall be portion marked. Each portion shall be marked to reflect the highest level of information contained in that portion. A text portion containing a uniform resource locator (URL) or reference (i.e., link) to another document shall be portion marked based on the classification of the content of the URL or link text, not the content to which it points. This is true even when the data accessible via the URL or link reflects a higher classification marking. (RD and FRD is not required to be portion marked except for titles and subjects, but may be marked as indicated.)

The subject line’s portion marking shall show the classification of the subject line itself, not the overall classification of the e-mail. The subject line portion marking shall reflect the sensitivity of the subject alone and shall not consider the sensitivity of the e-mail content or attachments. Subject lines and titles shall be portion marked before the subject or title.

The classification authority block shall be placed after the signature block, but before the banner line at the bottom of the e-mail. The block may optionally appear as a single linear text string instead of the traditional three line format.

The text for the special control marking (Derivative Declassifier review required prior to declassification) must appear on all classified NSI e-mail messages.
When forwarding or replying to an e-mail, individuals shall ensure that the markings used reflect the classification markings for all the content present in the resulting message and any attachments. This will include any newly drafted material, material received from previous senders, and any attachments.

For unclassified e-mail or other messages transmitted over a classified system, the designation “UNCLASSIFIED” shall be conspicuously placed within the banner line and any dissemination controls, such as “FOUO” or “PROPIN” (Proprietary Information), that may apply shall be included.

E-mail containing NSI and TFNI must be marked as above with the addition of the TFNI identifier in the overall classification marking.

E-mail used as transmittal documents shall be marked as required for transmittal documents would be marked if hard copy. Place the instruction indicating the e-mail’s overall classification level when separated from its enclosures just above the banner line at the bottom of the message.

E-mail containing Restricted Data (RD) and/or Formerly Restricted Data (FRD) are to be marked in accordance with 10 CFR Part 1045, Nuclear Classification and Declassification, including the overall level and category and the RD or FRD admonishment. Titles and classified signature blocks must be portion marked, but otherwise, portion marking may occur but is not required.

A warning notice must be placed on documents which are not marked as final documents that they may not be used as a source for derivative classification and it must provide a point of contact and instructions on how to obtain further guidance on use and classification of the information when such documents cannot be marked.
