>>

>> This Proposal is very controversial and has not been widely publicized until this past weekend and it is thus in the public interest that the comment period is extended in time.

>>

>> Climate change is a proven scientific fact! Natural gas in it's fracking,leaks, transmission and distribution is essentially methane gas, no better than the use of use of coal. It is more potent of a gas by 86 times than C02.

>>

>> Exports of this gas as proposed not only lowers domestic supply, but also raises prices here in the United States . Foreign Exports can bring in 3-4 times the amount as opposed to domestic prices only filling the coffers of the wall street backers.

>>

>> This proposal is not in the public interest and the public, not the CEO's should have more time for Public comment.
