

Electricity Distribution & End-Use: The Solar Component

Thomas P. Kimbis, Vice President
Solar Energy Industries Association – SEIA

Top Solar Issues – Utility-Scale Solar

- Ensure that states fully understand solar characteristics in developing Clean Power Plan compliance plans.
- Ensure that states who seek to build a more diverse electricity resource mix retain or strengthen their renewable portfolio standards.
- Assist utilities seeking large-scale procurement with development of Integrated Resource Plans (IRPs) and avoid overly restrictive use regulations.

Top Solar Issues – Distributed Gen. Solar

- Ensure that net metering, a fundamental value proposition of distributed solar, is preserved for consumers.
- Ensure that rate design proceedings fairly value any benefits or costs associated with distributed solar.
- Ensure residential solar consumers fully understand the solar transaction, while increasing solar company understanding of industry rules.

Thank You
