State of Iowa
ENERGY SECTOR RISK PROFILE

This State Energy Risk Profile examines the relative magnitude of the risks that the State of Iowa’s energy infrastructure routinely encounters in comparison with the probable impacts. Natural and man-made hazards with the potential to cause disruption of the energy infrastructure are identified.

The Risk Profile highlights risk considerations relating to the electric, petroleum and natural gas infrastructures to become more aware of risks to these energy systems and assets.

NATURAL HAZARDS OVERVIEW

Annual Frequency of Occurrence of Natural Hazards in Iowa (1996–2014)

According to NOAA, the most common natural hazard in Iowa is Thunderstorm & Lightning, which occurs once every 3.4 days on the average during the months of March to October.

The second-most common natural hazard in Iowa is Flood, which occurs once every 7.7 days on the average.

Annualized Property Loss due to Natural Hazards in Iowa (1996–2014)

As reported by NOAA, the natural hazard in Iowa that caused the greatest overall property loss during 1996 to 2014 is Drought at $302.9 million per year.

The natural hazard with the second-highest property loss in Iowa is Flood at $125.3 million per year.

Data Source: NOAA
Electric Power Plants: 234 (2% total U.S.)
- Coal-fired: 23 (2% total U.S.)
- Petroleum-fired: 106 (5% total U.S.)
- Natural Gas-fired: 34 (1% total U.S.)
- Nuclear: 1 (1% total U.S.)
- Hydro-electric: 4 (<1% total U.S.)
- Other Renewable: 66 (2% total U.S.)

Transmission Lines:
- High-Voltage (>230 kV): 2,740 Miles
- Low-Voltage (<230 kV): 5,452 Miles
Electric Transmission

- According to NERC, the leading cause of electric transmission outages in Iowa is Severe Weather - Thunderstorm.
- Iowa experienced 14 electric transmission outages from 1992 to 2009, affecting a total of 555,122 electric customers.
- Severe Weather - Thunderstorm affected the largest number of electric customers as a result of electric transmission outages.

Number of NERC-Reported Electric Transmission Outages by Cause (1992–2009)

Electric Distribution

- Between 2008 and 2013, the greatest number of electric outages in Iowa has occurred during the month of June.
- The leading cause of electric outages in Iowa during 2008 to 2013 was Faulty Equipment/Human Error.
- On average, the number of people affected annually by electric outages during 2008 to 2013 in Iowa was 116,995.
- The average duration of electric outages in Iowa during 2008 to 2013 was 2,722 minutes or 45.4 hours a year.

Utility Outage Data (2008–2013)

- NOTE: # of Incidents – The number within each pie slice is the number of event incidents attributable to each cause.
PETROLEUM

Petroleum Infrastructure Overview
- Refineries: 0 (0% total U.S.)
- Terminals: 23 (1% total U.S.)
- Crude Pipelines: 0,295 Miles (1% total U.S.)
- Product Pipelines: 11,760 Miles (2% total U.S.)
- Bio-Refineries (Ethanol): 38 (19% total U.S.)
Petroleum Transport

The leading event type affecting the transport of petroleum product by rail and truck in Iowa during 1986 to 2014 was Incorrect Operation for rail transport and Miscellaneous/Unknown for truck transport, with an average 0.6 (or one incident every 1.6 years) and 7.6 incidents per year, respectively.

Top Events Affecting Petroleum Transport by Truck and Rail (1986–2014)

The leading event type affecting crude oil pipeline and petroleum product pipelines in Iowa during 1986 to 2014 was Material/Weld Failures for crude oil pipelines and Equipment Failure for product pipelines, with an average 0.07 and 0.9 incidents per year (or one incident every 14.5 and 1.1 years), respectively.

Top Events Affecting Crude Oil and Refined Product Pipelines in Iowa (1986–2014)
Natural Gas Infrastructure Overview
- Gas Wells: 0 (0% total U.S.)
- Processing Plants: 0 (0% total U.S.)
- Storage Fields: 4 (1% total U.S.)
- Interstate Pipelines: 18,900 Miles (4% total U.S.)
- Local Distribution Companies: 60 (4% total U.S.)
Natural Gas Transport

The leading event type affecting natural gas transmission and distribution pipelines in Iowa during 1986 to 2014 was Outside Force for Transmission Pipelines and Miscellaneous/Unknown for Distribution Pipelines, with an average 0.35 and 0.68 incidents per year (or one incident every 2.8 and 1.5 years), respectively.

Top Events Affecting Natural Gas Transmission and Distribution in Iowa (1986-2014)

Event Related
  *The NERC disturbance reports are not published after 2009.

Notes
- Natural Hazard, Other, includes extreme weather events such as astronomical low tide, dense smoke, frost/freeze, and rip currents.
- Each incident type is an assembly of similar causes reported in the data source. Explanations for the indescribable incident types are below.
  - Outside Force refers to pipeline failures due to vehicular accident, sabotage, or vandalism.
  - Miscellaneous/Unknown includes releases or failures resulting from any other cause not listed or of an unknowable nature.
  - Overdemand refers to outages that occur when the demand for electricity is greater than the supply, causing forced curtailment.
- Number (#) of Incidents – The number within each pie chart piece is the number of outages attributable to each cause.
