State of Indiana
ENERGY SECTOR RISK PROFILE

This State Energy Risk Profile examines the relative magnitude of the risks that the State of Indiana’s energy infrastructure routinely encounters in comparison with the probable impacts. Natural and man-made hazards with the potential to cause disruption of the energy infrastructure are identified.

The Risk Profile highlights risk considerations relating to the electric, petroleum and natural gas infrastructures to become more aware of risks to these energy systems and assets.

ININDIANA STATE FACTS

State Overview
Population: 6.57 million (2% total U.S.)
Housing Units: 2.81 million (2% total U.S.)
Business Establishments: 0.14 million (2% total U.S.)

Annual Energy Consumption
Electric Power: 105.2 TWh (3% total U.S.)
Coal: 48,700 MSTN (5% total U.S.)
Natural Gas: 285 Bcf (1% total U.S.)
Motor Gasoline: 66,200 Mbarrels (2% total U.S.)
Distillate Fuel: 39,200 Mbarrels (3% total U.S.)

Annual Energy Production
Electric Power Generation: 114.7 TWh (3% total U.S.)
Coal: 92.5 TWh, 81% [20.1 GW total capacity]
Petroleum: 0.9 TWh, <1% [0.8 GW total capacity]
Natural Gas: 14.5 TWh, 13% [6.7 GW total capacity]
Nuclear: 0 TWh, 0% [0 GW total capacity]
Other Renewable: 3.2 TWh, 3% [1.5 GW total capacity]

Coal: 36,700 MSTN (4% total U.S.)
Natural Gas: 10 Bcf (<1% total U.S.)
Crude Oil: 2,400 Mbarrels (<1% total U.S.)
Ethanol: 22,400 Mbarrels (7% total U.S.)

NATURAL HAZARDS OVERVIEW

Annual Frequency of Occurrence of Natural Hazards in Indiana (1996–2014)

According to NOAA, the most common natural hazard in Indiana is Thunderstorm & Lightning, which occurs once every 4 days on the average during the months of March to October.

The second-most common natural hazard in Indiana is Flood, which occurs once every 6.2 days on the average.

Annualized Property Loss due to Natural Hazards in Indiana (1996–2014)

As reported by NOAA, the natural hazard in Indiana that caused the greatest overall property loss during 1996 to 2014 is Flood at $75.4 million per year.

The natural hazard with the second-highest property loss in Indiana is Tornado at $20.2 million per year.
**Electric Power Plants**: 87 (1% total U.S.)
- Coal-fired: 29 (3% total U.S.)
- Petroleum-fired: 17 (1% total U.S.)
- Natural Gas-fired: 24 (1% total U.S.)
- Nuclear: 0 (0% total U.S.)
- Hydro-electric: 5 (<1% total U.S.)
- Other Renewable: 12 (<1% total U.S.)

**Transmission Lines**:
- High-Voltage (>230 kV): 5,132 Miles
- Low-Voltage (<230 kV): 8,022 Miles
Electric Transmission

- According to NERC, the leading cause of electric transmission outages in Indiana is *Severe Weather - Thunderstorm.*
- Indiana experienced 25 electric transmission outages from 1992 to 2009, affecting a total of 888,625 electric customers.
- *Severe Weather - Other* affected the largest number of electric customers as a result of electric transmission outages.

### Electric Customers Disrupted by NERC-Reported Electric Transmission Outages by Cause (1992–2009)

- Severe Weather - Thunderstorm
- Faulty Equipment / Human Error
- Severe Weather - Heat Wave
- Major Generation Inadequacy
- Severe Weather - Other
- All Other Causes

#### # of Incidents

Data Source: NERC

Electric Distribution

- Between 2008 and 2013, the greatest number of electric outages in Indiana has occurred during the month of *June.*
- The leading cause of electric outages in Indiana during 2008 to 2013 was *Weather/Falling Trees.*
- On average, the number of people affected annually by electric outages during 2008 to 2013 in Indiana was *288,830.*
- The average duration of electric outages in Indiana during 2008 to 2013 was 5,098 minutes or 85.0 hours a year.

### Electric-Utility Reported Power Outages by Month (2008–2013)

- Data Source: Eaton

- Animal: 38
- Faulty Equipment / Human Error: 81
- Overdemand: 71
- Planned: 118
- Theft / Vandalism: 35
- Unknown: 0
- Vehicle Accident: 1
- Weather / Falling Trees: 16

Data Source: Eaton

### Utility Outage Data (2008–2013)

- Data Source: Eaton

NOTE: # of Incidents – The number within each pie slice is the number of event incidents attributable to each cause.
PETROLEUM

Petroleum Infrastructure Overview
- Refineries: 2 (1% total U.S.)
- Terminals: 55 (3% total U.S.)
- Crude Pipelines: 391 Miles (1% total U.S.)
- Product Pipelines: 15,000 Miles (2% total U.S.)
- Bio-Refineries (Ethanol): 12 (6% total U.S.)
Petroleum Transport

Top Events Affecting Petroleum Transport by Truck and Rail (1986–2014)

The leading event type affecting the transport of petroleum product by rail and truck in Indiana during 1986 to 2014 was Incorrect Operation for rail transport and Miscellaneous/Unknown for truck transport, with an average 1.3 and 8.2 incidents per year, respectively.

Top Events Affecting Crude Oil and Refined Product Pipelines in Indiana (1986–2014)

The leading event type affecting crude oil pipeline and petroleum product pipelines in Indiana during 1986 to 2014 was Equipment Failure for crude oil pipelines and Equipment Failure for product pipelines, with an average 0.34 (or one incident every 2.9 years) and 1.24 incidents per year, respectively.

Petroleum Refinery

The leading cause of petroleum refinery disruptions in Indiana from 2003 to 2014 was Maintenance/Turnaround. Indiana’s petroleum refineries experienced 121 major incidents from 2003 to 2014. The average production impact from disruptions of Indiana’s refineries from 2003 to 2014 is 46.4 thousand barrels per day.

Average Production Impact (thousand barrels per day) from Petroleum Refinery Outages in Indiana (2003–2014)
Natural Gas Infrastructure Overview
Gas Wells: 931 (<1% total U.S.)
Processing Plants: 0 (0% total U.S.)
Storage Fields: 27 (6% total U.S.)
Interstate Pipelines: 9,600 Miles (2% total U.S.)
Local Distribution Companies: 56 (3% total U.S.)
Natural Gas Transport

The leading event type affecting natural gas transmission and distribution pipelines in Indiana during 1986 to 2014 was Outside Force for Transmission Pipelines and Outside Force for Distribution Pipelines, with an average 0.26 (or one incident every 3.9 years) and 1.26 incidents per year, respectively.

Top Events Affecting Natural Gas Transmission and Distribution in Indiana (1986–2014)

- NPMS (2011) Natural Gas Pipeline (Miles of Interstate Pipeline)
- Platts (2014 Q2) Local Distribution Companies (LDCs)

Event Related

*The NERC disturbance reports are not published after 2009.

Notes

- Natural Hazard, Other, includes extreme weather events such as astronomical low tide, dense smoke, frost/freeze, and rip currents.
- Each incident type is an assembly of similar causes reported in the data source. Explanations for the indescribable incident types are below.
  - Outside Force refers to pipeline failures due to vehicular accident, sabotage, or vandalism.
  - Natural Forces refers to damage that occurs as a result of naturally occurring events (e.g., earth movements, flooding, high winds, etc.)
  - Miscellaneous/Unknown includes releases or failures resulting from any other cause not listed or of an unknowable nature.
  - Overdemand refers to outages that occur when the demand for electricity is greater than the supply, causing forced curtailment.
  - Number (#) of Incidents – The number within each pie chart piece is the number of outages attributable to each cause.
