State of Mississippi
ENERGY SECTOR RISK PROFILE

This State Energy Risk Profile examines the relative magnitude of the risks that the State of Mississippi’s energy infrastructure routinely encounters in comparison with the probable impacts. Natural and man-made hazards with the potential to cause disruption of the energy infrastructure are identified.

The Risk Profile highlights risk considerations relating to the electric, petroleum and natural gas infrastructures to become more aware of risks to these energy systems and assets.

MISSISSIPPI STATE FACTS

State Overview
- Population: 2.99 million (1% total U.S.)
- Housing Units: 1.28 million (1% total U.S.)
- Business Establishments: 0.06 million (1% total U.S.)

Annual Energy Consumption
- Electric Power: 48.4 TWh (1% total U.S.)
- Coal: 5,200 MSTN (1% total U.S.)
- Natural Gas: 251 Bcf (1% total U.S.)
- Motor Gasoline: 38,100 Mbarrels (1% total U.S.)
- Distillate Fuel: 20,400 Mbarrels (1% total U.S.)

Annual Energy Production
- Electric Power Generation: 54.6 TWh (1% total U.S.)
- Coal: 7.2 TWh, 13% (2.9 GW total capacity)
- Petroleum: 0 TWh, 0% (0 GW total capacity)
- Natural Gas: 38.5 TWh, 71% (12.9 GW total capacity)
- Nuclear: 7.3 TWh, 13% (1.4 GW total capacity)
- Hydro: 0 TWh, 0% (0 GW total capacity)
- Other Renewable: 0 TWh, <1% (0.2 GW total capacity)

NATURAL HAZARDS OVERVIEW

Annual Frequency of Occurrence of Natural Hazards in Mississippi (1996–2014)

- According to NOAA, the most common natural hazard in Mississippi is Thunderstorm & Lightning, which occurs once every 2.9 days on the average during the months of March to October.
- The second-most common natural hazard in Mississippi is Flood, which occurs once every 11.8 days on the average.

Annualized Property Loss due to Natural Hazards in Mississippi (1996–2014)

- As reported by NOAA, the natural hazard in Mississippi that caused the greatest overall property loss during 1996 to 2014 is Hurricane at $373.5 million per year.
- The natural hazard with the second-highest property loss in Mississippi is Tornado at $57.3 million per year.
Electric Power Plants: 43 (<1% total U.S.)
- Coal-fired: 4 (<1% total U.S.)
- Petroleum-fired: 4 (<1% total U.S.)
- Natural Gas-fired: 31 (1% total U.S.)
- Nuclear: 1 (1% total U.S.)
- Hydro-electric: 0 (0% total U.S.)
- Other Renewable: 3 (<1% total U.S.)

Transmission Lines:
- High-Voltage (>230 kV): 3,960 Miles
- Low-Voltage (<230 kV): 248 Miles
Electric Transmission

- According to NERC, the leading cause of electric transmission outages in Mississippi is **Faulty Equipment/Human Error**.
- Mississippi experienced **34 electric transmission outages** from 1992 to 2009, affecting a total of **1,729,515 electric customers**.
- **Natural Disaster - Hurricane/Tropical Storm** affected the largest number of electric customers as a result of electric transmission outages.

- Data Source: NERC

**Number of NERC-Reported Electric Transmission Outages by Cause (1992–2009)**

- Data Source: NERC

Electric Distribution

**Electric-Utility Reported Power Outages by Month (2008–2013)**

- Between 2008 and 2013, the greatest number of electric outages in Mississippi has occurred during the month of **August**.
- The leading cause of electric outages in Mississippi during 2008 to 2013 was **Weather/Falling Trees**.
- On average, the number of people affected annually by electric outages during 2008 to 2013 in Mississippi was **81,888**.
- The average duration of electric outages in Mississippi during 2008 to 2013 was **1,162 minutes or 19.4 hours a year**.

**Utility Outage Data (2008–2013)**

- Data Source: Eaton

**NOTE:** # of Incidents – The number within each pie slice is the number of event incidents attributable to each cause.
**PETROLEUM**

**Petroleum Infrastructure Overview**
- Refineries: 3 (2% total U.S.)
- Terminals: 32 (2% total U.S.)
- Crude Pipelines: 1,346 Miles (3% total U.S.)
- Product Pipelines: 9,120 Miles (1% total U.S.)
- Bio-Refineries (Ethanol): 1 (<1% total U.S.)
Petroleum Transport

Top Events Affecting Petroleum Transport by Truck and Rail (1986–2014)

- The leading event type affecting the transport of petroleum product by rail and truck in Mississippi during 1986 to 2014 was Incorrect Operation for rail transport and Miscellaneous/Unknown for truck transport, with an average 0.5 (or one incident every 2 years) and 6.0 incidents per year, respectively.

Petroleum Refinery

- The leading cause of petroleum refinery disruptions in Mississippi from 2003 to 2014 was Equipment Failure or Damage. Mississippi's petroleum refineries experienced 51 major incidents from 2003 to 2014. The average production impact from disruptions of Mississippi's refineries from 2003 to 2014 is 77.4 thousand barrels per day.

Average Production Impact (thousand barrels per day) from Petroleum Refinery Outages in Mississippi (2003–2014)
NATURAL GAS

Natural Gas Infrastructure Overview
Gas Wells: 1,643 (<1% total U.S.)
Processing Plants: 3 (1% total U.S.)
Storage Fields: 13 (3% total U.S.)
Interstate Pipelines: 13,920 Miles (3% total U.S.)
Local Distribution Companies: 73 (4% total U.S.)
Natural Gas Transport

- The leading event type affecting natural gas transmission and distribution pipelines in Mississippi during 1986 to 2014 was Miscellaneous/Unknown for Transmission Pipelines and Miscellaneous/Unknown for Distribution Pipelines, with an average 0.74 and 0.35 incidents per year (or one incident every 1.3 and 2.8 years), respectively.

Top Events Affecting Natural Gas Transmission and Distribution in Mississippi (1986–2014)

- Natural Gas Transport

Natural Gas Processing

- According to data derived from DOE's Energy Assurance Daily, the leading cause of natural gas processing plant disruptions in Mississippi from 2005 to 2014 is Operational Upset or Process Problem.
- Mississippi's natural gas processing plants experienced 3 disruptions from 2005 to 2014.
- The average production impact from disruptions of Mississippi's natural gas processing plants from 2005 to 2014 is 1,333 million cubic feet per day (MMcfd).

- Average Production Impact (MMcfd) from Natural Gas Processing Plant Disruptions in Mississippi (2005–2014)

- NPMS (2011) Natural Gas Pipeline (Miles of Interstate Pipeline)
- Platts (2014 Q2) Local Distribution Companies (LDCs)

Event Related

* The NERC disturbance reports are not published after 2009.

Notes

- Natural Hazard, Other, includes extreme weather events such as astronomical low tide, dense smoke, frost/freeze, and rip currents.
- Each incident type is an assembly of similar causes reported in the data source. Explanations for the indescribable incident types are below.
  - Outside Force refers to pipeline failures due to vehicular accident, sabotage, or vandalism.
  - Natural Forces refers to damage that occurs as a result of naturally occurring events (e.g., earth movements, flooding, high winds, etc.)
  - Miscellaneous/Unknown includes releases or failures resulting from any other cause not listed or of an unknowable nature.
  - Overdemand refers to outages that occur when the demand for electricity is greater than the supply, causing forced curtailment.
  - Number (#) of Incidents – The number within each pie chart piece is the number of outages attributable to each cause.
