This State Energy Risk Profile examines the relative magnitude of the risks that the State of Nevada’s energy infrastructure routinely encounters in comparison with the probable impacts. Natural and man-made hazards with the potential to cause disruption of the energy infrastructure are identified.

The Risk Profile highlights risk considerations relating to the electric, petroleum and natural gas infrastructures to become more aware of risks to these energy systems and assets.

**NATURAL HAZARDS OVERVIEW**

**Annual Frequency of Occurrence of Natural Hazards in Nevada (1996–2014)**

- According to NOAA, the most common natural hazard in Nevada is Thunderstorm & Lightning, which occurs once every 7.3 days on the average during the months of March to October.
- The second-most common natural hazard in Nevada is Winter Storm & Extreme Cold, which occurs once every 13.8 days on the average during the months of October to March.

**Annualized Property Loss due to Natural Hazards in Nevada (1996–2014)**

- As reported by NOAA, the natural hazard in Nevada that caused the greatest overall property loss during 1996 to 2014 is Flood at $5.1 million per year.
- The natural hazard with the second-highest property loss in Nevada is Thunderstorm & Lightning at $2.9 million per year.
**Electric Power Plants**: 40 (0% total U.S.)
- Coal-fired: 3 (<1% total U.S.)
- Petroleum-fired: 2 (<1% total U.S.)
- Natural Gas-fired: 19 (1% total U.S.)
- Nuclear: 0 (0% total U.S.)
- Hydro-electric: 6 (<1% total U.S.)
- Other Renewable: 10 (<1% total U.S.)

**Transmission Lines**:
- High-Voltage (>230 kV): 1,395 Miles
- Low-Voltage (<230 kV): 415 Miles
Electric Transmission

- According to NERC, the leading cause of electric transmission outages in Nevada is **Transmission Line Faults and Overloads**.
- Nevada experienced **11 electric transmission outages** from 1992 to 2009, affecting a total of 442,501 electric customers.
- **Transmission Line Faults and Overloads** affected the largest number of electric customers as a result of electric transmission outages.

Number of NERC-Reported Electric Transmission Outages by Cause (1992–2009)

- Data Source: NERC

Electric Distribution

Electric Utility Reported Power Outages by Month (2008–2013)

- Between 2008 and 2013, the greatest number of electric outages in Nevada has occurred during the month of **March**.
- The leading cause of electric outages in Nevada during 2008 to 2013 was **Faulty Equipment/Human Error**.
- On average, the number of people affected annually by electric outages during 2008 to 2013 in Nevada was **66,345**.
- The average duration of electric outages in Nevada during 2008 to 2013 was **1,795 minutes or 29.9 hours a year**.

Utility Outage Data (2008–2013)

- Data Source: Eaton

NOTE: # of Incidents – The number within each pie slice is the number of event incidents attributable to each cause.
PETROLEUM

Petroleum Infrastructure Overview
Refineries: 1 (1% total U.S.)
Terminals: 11 (1% total U.S.)
Crude Pipelines: 0 Miles (0% total U.S.)
Product Pipelines: 1,620 Miles (<1% total U.S.)
Bio-Refineries (Ethanol): 0 (0% total U.S.)
Petroleum Transport

The leading event type affecting the transport of petroleum product by rail and truck in Nevada during 1986 to 2014 was Incorrect Operation for rail transport and Incorrect Operation for truck transport, with an average 1.1 and 1.2 incidents per year, respectively.

Top Events Affecting Petroleum Transport by Truck and Rail (1986–2014)

Petroleum Refinery

Public data available on major incidents affecting petroleum refineries shows Nevada's petroleum refinery experienced 0 major incidents from 2003 to 2014.
**NATURAL GAS**

**Natural Gas Infrastructure Overview**

- Gas Wells: 0 (0% total U.S.)
- Processing Plants: 0 (0% total U.S.)
- Storage Fields: 0 (0% total U.S.)
- Interstate Pipelines: 6,480 Miles (1% total U.S.)
- Local Distribution Companies: 9 (1% total U.S.)
Natural Gas Transport

The leading event type affecting natural gas transmission and distribution pipelines in Nevada during 1986 to 2014 was Outside Force for Transmission Pipelines and Outside Force for Distribution Pipelines, with an average 0.19 and 0.39 incidents per year (or one incident every 5.2 and 2.6 years), respectively.

Top Events Affecting Natural Gas Transmission and Distribution in Nevada (1986-2014)

- NPMS (2011) Natural Gas Pipeline (Miles of Interstate Pipeline)
- Platts (2014 Q2) Local Distribution Companies (LDCs)

Event Related

  *The NERC disturbance reports are not published after 2009.

Notes

- Natural Hazard, Other, includes extreme weather events such as astronomical low tide, dense smoke, frost/freeze, and rip currents.
- Each incident type is an assembly of similar causes reported in the data source. Explanations for the indescribable incident types are below.
- Outside Force refers to pipeline failures due to vehicular accident, sabotage, or vandalism.
- Natural Forces refers to damage that occurs as a result of naturally occurring events (e.g., earth movements, flooding, high winds, etc.)
- Miscellaneous/Unknown includes releases or failures resulting from any other cause not listed or of an unknowable nature.
- Overdemand refers to outages that occur when the demand for electricity is greater than the supply, causing forced curtailment.
- Number (#) of Incidents – The number within each pie chart piece is the number of outages attributable to each cause.
