State of New York
ENERGY SECTOR RISK PROFILE

This State Energy Risk Profile examines the relative magnitude of the risks that the State of New York’s energy infrastructure routinely encounters in comparison with the probable impacts. Natural and man-made hazards with the potential to cause disruption of the energy infrastructure are identified.

The Risk Profile highlights risk considerations relating to the electric, petroleum and natural gas infrastructures to become more aware of risks to these energy systems and assets.

NEW YORK STATE FACTS

State Overview
- Population: 19.65 million (6% total U.S.)
- Housing Units: 8.13 million (6% total U.S.)
- Business Establishments: 0.53 million (7% total U.S.)

Annual Energy Consumption
- Electric Power: 143.2 TWh (4% total U.S.)
- Coal: 3,000 MSTN (<1% total U.S.)
- Natural Gas: 47 Bcf (<1% total U.S.)
- Motor Gasoline: 126,500 Mbarrels (4% total U.S.)
- Distillate Fuel: 57,400 Mbarrels (4% total U.S.)

Annual Energy Production
- Electric Power Generation: 135.8 TWh (3% total U.S.)
  - Coal: 4.6 TWh, 3% [2.9 GW total capacity]
  - Petroleum: 0.6 TWh, <1% [5.7 GW total capacity]
  - Natural Gas: 39.5 TWh, 44% [21.1 GW total capacity]
  - Nuclear: 30.8 TWh, 30% [5.7 GW total capacity]
  - Hydro: 24.2 TWh, 18% [5.9 GW total capacity]
  - Other Renewable: 3.0 TWh, 2% [1.8 GW total capacity]
- Coal: 0 MSTN (0% total U.S.)
- Natural Gas: 30 Bcf (<1% total U.S.)
- Crude Oil: 400 Mbarrels (<1% total U.S.)
- Ethanol: 3,800 Mbarrels (1% total U.S.)

NATURAL HAZARDS OVERVIEW

According to NOAA, the most common natural hazard in New York is Thunderstorm & Lightning, which occurs once every 3.9 days on the average during the months of March to October.

The second-most common natural hazard in New York is Winter Storm & Extreme Cold, which occurs once every 5.7 days on the average during the months of October to March.

As reported by NOAA, the natural hazard in New York that caused the greatest overall property loss during 1996 to 2014 is Flood at $120.6 million per year.

The natural hazard with the second-highest property loss in New York is Winter Storm & Extreme Cold at $19.9 million per year.
**Electric Power Plants:** 334 (3% total U.S.)
- Coal-fired: 10 (1% total U.S.)
- Petroleum-fired: 51 (2% total U.S.)
- Natural Gas-fired: 87 (3% total U.S.)
- Nuclear: 5 (4% total U.S.)
- Hydro-electric: 157 (5% total U.S.)
- Other Renewable: 24 (1% total U.S.)

**Transmission Lines:**
- High-Voltage (>230 kV): 2,832 Miles
- Low-Voltage (<230 kV): 4,371 Miles
Electric Transmission

- According to NERC, the leading cause of electric transmission outages in New York is Faulty Equipment/Human Error.
- New York experienced 50 electric transmission outages from 1992 to 2009, affecting a total of 7,952,784 electric customers.
- Faulty Equipment/Human Error affected the largest number of electric customers as a result of electric transmission outages.

Number of NERC-Reported Electric Transmission Outages by Cause (1992–2009)

Electric Distribution

- Between 2008 and 2013, the greatest number of electric outages in New York has occurred during the month of July.
- The leading cause of electric outages in New York during 2008 to 2013 was Weather/Falling Trees.
- On average, the number of people affected annually by electric outages during 2008 to 2013 in New York was 2,828,062.
- The average duration of electric outages in New York during 2008 to 2013 was 7,865 minutes or 131.1 hours a year.

Electric-Utility Reported Power Outages by Month (2008–2013)

Utility Outage Data (2008–2013)

NOTE: # of Incidents – The number within each pie slice is the number of event incidents attributable to each cause.
PETROLEUM

Petroleum Infrastructure Overview
Refineries: 0 (0% total U.S.)
Terminals: 71 (4% total U.S.)
Crude Pipelines: 86 Miles (<1% total U.S.)
Product Pipelines: 1,800 Miles (<1% total U.S.)
Bio-Refineries (Ethanol): 2 (1% total U.S.)
Petroleum Transport

The leading event type affecting the transport of petroleum product by rail and truck in New York during 1986 to 2014 was Incorrect Operation for rail transport and Miscellaneous/Unknown for truck transport, with an average 1.0 and 42.5 incidents per year, respectively.

Top Events Affecting Petroleum Transport by Truck and Rail (1986–2014)

The leading event type affecting the transport of petroleum product by rail and truck in New York during 1986 to 2014 was Incorrect Operation for rail transport and Miscellaneous/Unknown for truck transport, with an average 0.07 and 0.31 incidents per year (or one incident every 14.5 and 3.2 years), respectively.

Top Events Affecting Crude Oil and Refined Product Pipelines in New York (1986–2014)

The leading event type affecting crude oil pipeline and petroleum product pipelines in New York during 1986 to 2014 was Material/Weld Failures for crude oil pipelines and Material/Weld Failures for product pipelines, with an average 0.07 and 0.31 incidents per year (or one incident every 14.5 and 3.2 years), respectively.
## NATURAL GAS

**Natural Gas Infrastructure Overview**
- Gas Wells: 7,145 (1% total U.S.)
- Processing Plants: 0 (0% total U.S.)
- Storage Fields: 22 (5% total U.S.)
- Interstate Pipelines: 3,840 Miles (1% total U.S.)
- Local Distribution Companies: 31 (2% total U.S.)
Natural Gas Transport

The leading event type affecting natural gas transmission and distribution pipelines in New York during 1986 to 2014 was **Equipment Failure** for Transmission Pipelines and **Miscellaneous/Unknown** for Distribution Pipelines, with an average 0.26 (or one incident every 3.9 years) and 2.39 incidents per year, respectively.

- **Corrosion**: $25,888
- **Equipment Failure**: $83,137
- **Excavation Damage**: $7,383
- **Incorrect Operation**: $1,548
- **Material/Weld Failures**: $7,360
- **Miscellaneous/Unknown**: $1,121
- **Natural Forces**: $39,1,132
- **Outside Force**: $672,1,769

Overview Information

- Census Bureau (2012) State and County QuickFacts [http://quickfacts.census.gov/qfd/download_data.html]

Production Numbers

Consumption Numbers

Electricity

- Platts (2014 Q2) Transmission Lines (Miles by Voltage Level)
- Platts (2014 Q2) Power Plants (Production and Capacity by Type)

Petroleum

- Argonne National Laboratory (2012) Petroleum Terminal Database
- Argonne National Laboratory (2014) Ethanol Plants
- NPMS (2011) Petroleum Product Pipeline (Miles of Interstate Pipeline)
- NPMS (2011) Crude Pipeline (Miles of Interstate Pipeline)

Natural Gas

- EIA (2013) Number of Producing Gas Wells [http://www.eia.gov/dnav/ng/ng_prod_wells_s1_a.htm]
- NPMS (2011) Natural Gas Pipeline (Miles of Interstate Pipeline)
- Platts (2014 Q2) Local Distribution Companies (LDCs)

Event Related

*The NERC disturbance reports are not published after 2009.

Notes

- Natural Hazard, Other, includes extreme weather events such as astronomical low tide, dense smoke, frost/freeze, and rip currents.
- Each incident type is an assembly of similar causes reported in the data source. Explanations for the indescribable incident types are below.
- Outside Force refers to pipeline failures due to vehicular accident, sabotage, or vandalism.
- Natural Forces refers to damage that occurs as a result of naturally occurring events (e.g., earth movements, flooding, high winds, etc.)
- Miscellaneous/Unknown includes releases or failures resulting from any other cause not listed or of an unknowable nature.
- Overdemand refers to outages that occur when the demand for electricity is greater than the supply, causing forced curtailment.
- Number (#) of Incidents – The number within each pie chart piece is the number of outages attributable to each cause.
