State of West Virginia
ENERGY SECTOR RISK PROFILE

This State Energy Risk Profile examines the relative magnitude of the risks that the State of West Virginia’s energy infrastructure routinely encounters in comparison with the probable impacts. Natural and man-made hazards with the potential to cause disruption of the energy infrastructure are identified.

The Risk Profile highlights risk considerations relating to the electric, petroleum and natural gas infrastructures to become more aware of risks to these energy systems and assets.

WEST VIRGINIA STATE FACTS

State Overview
- Population: 1.85 million (1% total U.S.)
- Housing Units: 0.88 million (1% total U.S.)
- Business Establishments: 0.04 million (1% total U.S.)

Annual Energy Consumption
- Electric Power: 30.8 TWh (1% total U.S.)
- Coal: 30,600 MSTN (3% total U.S.)
- Natural Gas: 401 Bcf (2% total U.S.)
- Motor Gasoline: 16,600 Mbarrels (1% total U.S.)
- Distillate Fuel: 12,200 Mbarrels (1% total U.S.)

Annual Energy Production
- Electric Power Generation: 73.4 TWh (2% total U.S.)
  - Coal: 70.3 TWh, 96% [15 GW total capacity]
  - Petroleum: 0.1 TWh, <1% [0.02 GW total capacity]
  - Natural Gas: 0.2 TWh, <1% [1.2 GW total capacity]
  - Nuclear: 0 TWh, 0% [0 GW total capacity]
  - Hydro: 1.4 TWh, 2% [0.3 GW total capacity]
  - Other Renewable: 1.3 TWh, 2% [0.6 GW total capacity]
- Coal: 120,400 MSTN (12% total U.S.)
- Natural Gas: 540 Bcf (2% total U.S.)
- Crude Oil: 2,600 Mbarrels (<1% total U.S.)
- Ethanol: 0 Mbarrels (0% total U.S.)

NATURAL HAZARDS OVERVIEW

Annual Frequency of Occurrence of Natural Hazards in West Virginia (1996–2014)

- According to NOAA, the most common natural hazard in West Virginia is Thunderstorm & Lightning, which occurs once every 5.5 days on the average during the months of March to October.
- The second-most common natural hazard in West Virginia is Winter Storm & Extreme Cold, which occurs once every 9 days on the average during the months of October to March.

Annualized Property Loss due to Natural Hazards in West Virginia (1996–2014)

- As reported by NOAA, the natural hazard in West Virginia that caused the greatest overall property loss during 1996 to 2014 is Flood at $33.9 million per year.
- The natural hazard with the second-highest property loss in West Virginia is Thunderstorm & Lightning at $4.6 million per year.
Electric Power Plants: 37 (<1% total U.S.)
- Coal-fired: 16 (1% total U.S.)
- Petroleum-fired: 1 (<1% total U.S.)
- Natural Gas-fired: 4 (<1% total U.S.)
- Nuclear: 0 (0% total U.S.)
- Hydro-electric: 11 (<1% total U.S.)
- Other Renewable: 5 (<1% total U.S.)

Transmission Lines:
- High-Voltage (>230 kV): 2,941 Miles
- Low-Voltage (<230 kV): 490 Miles
Electric Transmission

- According to NERC, the leading cause of electric transmission outages in West Virginia is **Severe Weather - Thunderstorm**.
- West Virginia experienced **14 electric transmission outages** from 1992 to 2009, affecting a total of **678,861 electric customers**.
- **Severe Weather - Thunderstorm** affected the largest number of electric customers as a result of electric transmission outages.

### Electric Customers Disrupted by NERC-Reported Electric Transmission Outages by Cause (1992–2009)

<table>
<thead>
<tr>
<th>Cause</th>
<th>Number of Customers Disrupted</th>

Data Source: NERC

### Electric Distribution

- Between 2008 and 2013, the greatest number of electric outages in West Virginia has occurred during the month of **May**.
- The leading cause of electric outages in West Virginia during 2008 to 2013 was **Weather/Falling Trees**.
- On average, the number of people affected annually by electric outages during 2008 to 2013 in West Virginia was **307,975**.
- The average duration of electric outages in West Virginia during 2008 to 2013 was **1,317 minutes or 21.9 hours a year**.

### Causes of Electric-Utility Reported Outages (2008–2013)

- **83** incidents due to **Unknown**
- **39** incidents due to **Faulty Equipment / Human Error**
- **30** incidents due to **Vehicle Accident**
- **24** incidents due to **Weather / Falling Trees**
- **9** incidents due to **Overdemand**
- **9** incidents due to **Theft / Vandalism**
- **3** incidents due to **Planned**
- **0** incidents due to **Animal**

Data Source: Eaton

### Utility Outage Data (2008–2013)

- **Total number of people affected by outages**
- **Total duration of outages (minutes)**

Data Source: Eaton

NOTE: # of Incidents – The number within each pie slice is the number of event incidents attributable to each cause.
PETROLEUM

Petroleum Infrastructure Overview
- Refineries: 1 (1% total U.S.)
- Terminals: 8 (<1% total U.S.)
- Crude Pipelines: 4 Miles (<1% total U.S.)
- Product Pipelines: 1,620 Miles (<1% total U.S.)
- Bio-Refineries (Ethanol): 0 (0% total U.S.)
Petroleum Transport

The leading event type affecting the transport of petroleum product by rail and truck in West Virginia during 1986 to 2014 was Incorrect Operation for rail transport and Miscellaneous/Unknown for truck transport, with an average 0.2 (or one incident every 5 years) and 3.6 incidents per year, respectively.

Top Events Affecting Petroleum Transport by Truck and Rail (1986–2014)

Petroleum Refinery

Public data available on major incidents affecting petroleum refineries shows West Virginia’s petroleum refinery experienced 0 major incidents from 2003 to 2014.
NATURAL GAS

Natural Gas Infrastructure Overview
Gas Wells: 53,318 (11% total U.S.)
Processing Plants: 11 (2% total U.S.)
Storage Fields: 37 (8% total U.S.)
Interstate Pipelines: 3,240 Miles (1% total U.S.)
Local Distribution Companies: 33 (2% total U.S.)
Natural Gas Transport

The leading event type affecting natural gas transmission and distribution pipelines in West Virginia during 1986 to 2014 was Corrosion for Transmission Pipelines and Outside Force for Distribution Pipelines, with an average 0.65 and 0.39 incidents per year (or one incident every 1.6 and 2.6 years), respectively.

Top Events Affecting Natural Gas Transmission and Distribution in West Virginia (1986-2014)

Natural Gas Processing

Insufficient public data are available on major incidents affecting natural gas processing plants in this state.
DATA SOURCES

Overview Information
- Census Bureau (2012) State and County QuickFacts [http://quickfacts.census.gov/qfd/download_data.html]

Production Numbers

Consumption Numbers

Electricity
- Platts (2014 Q2) Transmission Lines (Miles by Voltage Level)
- Platts (2014 Q2) Power Plants (Production and Capacity by Type)

Petroleum
- Argonne National Laboratory (2012) Petroleum Terminal Database
- Argonne National Laboratory (2014) Ethanol Plants
- NPMS (2011) Petroleum Product Pipeline (Miles of Interstate Pipeline)
- NPMS (2011) Crude Pipeline (Miles of Interstate Pipeline)

Natural Gas
- EIA (2013) Number of Producing Gas Wells [http://www.eia.gov/dnav/ng/ng_prod_wells_s1_a.htm]
- NPMS (2011) Natural Gas Pipeline (Miles of Interstate Pipeline)
- Platts (2014 Q2) Local Distribution Companies (LDCs)

Event Related
*The NERC disturbance reports are not published after 2009.

Notes
- Natural Hazard, Other, includes extreme weather events such as astronomical low tide, dense smoke, frost/freeze, and rip currents.
- Each incident type is an assembly of similar causes reported in the data source. Explanations for the indescribable incident types are below.
  - Outside Force refers to pipeline failures due to vehicular accident, sabotage, or vandalism.
  - Natural Forces refers to damage that occurs as a result of naturally occurring events (e.g., earth movements, flooding, high winds, etc.)
  - Miscellaneous/Unknown includes releases or failures resulting from any other cause not listed or of an unknowable nature.
  - Overdemand refers to outages that occur when the demand for electricity is greater than the supply, causing forced curtailment.
- Number (#) of Incidents – The number within each pie chart piece is the number of outages attributable to each cause.
