Department of Energy

Secretary's Award of Achievement

Presented to

The Office of Science's Center for Integrated Nanotechnologies (CINT) Project

For demonstrating significant results in completing a project within cost and schedule. The \$75.8 million CINT project was carried out as a partnership between Los Alamos National Laboratory and Sandia National Laboratory to design and build a major scientific user facility for nanoscience and nanotechnology. The CINT project team was responsible for expertly managing all efforts on the construction of two facilities at geographically different locations. The project successfully employed the use of video teleconferencing to remain fully cognizant of project challenges. The Core Facility at Sandia National Laboratory achieved a Leadership in Energy and Environmental Design "Silver" Certificate and was selected by Southwest Contractor Magazine as a New Mexico Best of 2007, Public Green Building Project.

Samuel W. Bodman
Secretary of Energy
