

United States  
Department of Energy

# **Federal Project Director of the Year for 2010**

Presented to:

## **Mr. Chad Henderson**

For demonstrating exceptional leadership and project management acumen as Federal Project Director (FPD) for the \$224 million Physical Sciences Facility (PSF) Project at the Pacific Northwest National Laboratory. The PSF provides research capabilities that will enable the Office of Environmental Management to proceed with accelerated cleanup under the Hanford Tri-Party Agreement. FPD since 2004, Chad applied strong functional and technical knowledge and outstanding leadership and project management skills to successfully lead his Integrated Project Team. Facing severe fiscal constraints, in addition to regulatory and mission related requirements of the three sponsoring agencies, Chad developed creative alternatives and opportunities for cost reductions that enabled the Department to enhance the project scope. His exceptional performance resulted in the delivery of the PSF on schedule and under budget with LEED Silver certification. Well done!

Steven Chu  
Secretary of Energy
