DOE has requested information regarding this question: 8. What state/local/tribal authorizations/approvals would be needed? Here is our response/comment: As we have mentioned previously (in our response to/comment re: DOE's second question), Native American -- and other low income and people of color communities -- must be taken off the target list to begin with, as a basic matter of environmental justice principles. But in addition, any targeted so-called "Interim Storage Facility" [ISF] location (including the transport corridor communities involved nationwide) must incorporate free-, fully informed, genuinely consent-based principles, in addition to
being scientifically suitable (geologically, hydrologically, etc.) and geographically sensible (such as re: transport risks; an example of regional inequity is the pattern of East dumping on West -- 90% of the atomic reactors, and thus commercial irradiated nuclear fuel/highly radioactive wastes, in the U.S., are in the eastern half of the country, and yet all proposed parking lot dumps are in the western half of the country). Such truly consent-based siting must extend from the local level, to the county, regional, state, and national levels, including all impacted residents and their elected officials at all levels. Any ISF PI must agree to bear the burden of full liability if anything goes wrong, and must agree to pay all costs associated with the facility -- not to burden the public (whether ratepayer or taxpayer) with any of this.
