

United States Department of Energy

# Federal Project Director of the Year for 2013

Presented to

***Mr. Everett Trollinger***

You are recognized for your exceptional leadership and project management acumen as Federal Project Director for the \$199 million Chemistry & Metallurgy Research Building Replacement (CMRR) Project/Radiological Lab Utility Office Bldg Equipment Installation (REI) Project at Los Alamos National Laboratory. The CMRR/REI Project installed state-of-the-art equipment in a 19,500 square foot Haz Cat II/Security Cat I radiological laboratory. Mr. Trollinger assumed responsibility for this project when it became an at-risk project little more than a year before scheduled completion. He led the integrated project team by identifying potential problems, proactively removing barriers, and executing innovative solutions to improve cost and schedule performance. Working closely with stakeholders, his effective communications and coordination among all parties fostered the concept of accountability and enabled the project to regain cost and schedule. Everett and his team's exceptional performance resulted in delivery of the CMRR/REI Project ahead of schedule and under budget.
