

United States Department of Energy

Project Management Achievement Award

Presented to

The Office of Environmental Management's K-31 Facility Demolition Project

The K-31 Facility Demolition project team successfully decontaminated and demolished the K-31 building ahead of schedule and significantly under budget. The K-31 building was one of the five uranium enrichment facilities built in 1951. The K-31 was a massive steel framed building covering approximately 19 acres under one roof and encompassing 1.66 million square feet of total floor area. Completing this demolition project ahead of schedule has enabled the acceleration of cleanup of the East Tennessee Technology Park and brings the Department another step closer to its goal of returning an environmentally remediated site to the local community. The project team is commended for their outstanding performance.

Rick Perry
Secretary of Energy
