

# Bioenergy Technologies Office 2017 Program Management Review

Bioenergy Technologies Office Response Jonathan Male BETO Director Arlington, Virginia July 13, 2017

- I. Welcome and Thank you
- II. The Bioeconomy
- III. BETO Impact
- IV. Trajectory to Cost Competitiveness
- v. FY17 Budget Request
- VI. BETO Partners

## Thank you!

**ENERGY** Energy Efficiency & Renewable Energy

#### Thank you again to the Steering Committee Members:

Peer Review Steering Committee		
Name	Affiliation	
Michael Lakeman*	Boeing	
Steven Costa	U.S. Department of Transportation	
Robert Graham	Ensyn	
John May	Hamilton Clark	
Shelie Miller	University of Michigan	
Dawn Mullally	American Lung Association	
Robert (Bob) Rummer	University of Kansas	
Bob Wooley	Biomass ad infinitum, LLC.	

## Thank you!

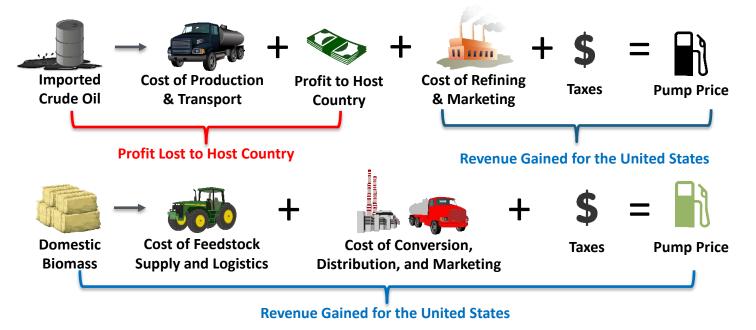

**ENERGY** Energy Efficiency & Renewable Energy

#### As well as the Lead Reviewers:

Peer Review Lead Reviewers		
Name	Affiliation	
Steve Searcy	Texas A&M University	
Gerson Santos Leon	Abengoa	
Eric Jarvis	Nexajoule	
Candace Wheeler	General Motors (Retired)	
Suzanne Lantz	DuPont	
Shawn Freitas	Thermochem Recovery International	
F. Michael McCurdy	Leidos	
Luca Zullo	VerdeNero, LLC.	

## Benefits of a Robust Domestic Bioeconomy **ENERGY** Energy Efficiency & Renewable Energy

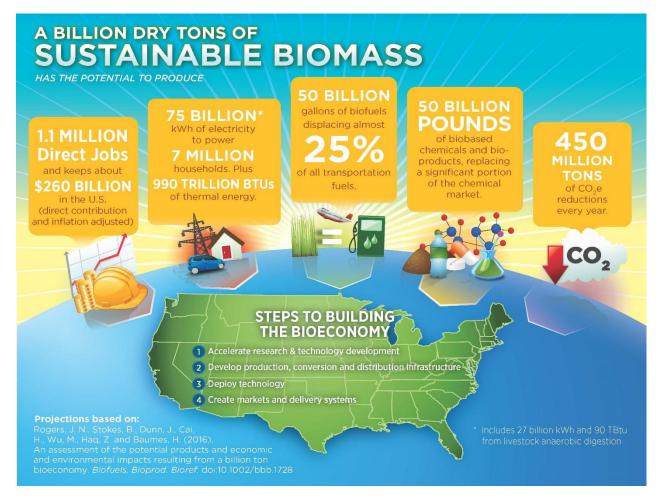

- Job Creation and Balance of Trade Displacing oil imports offers a massive opportunity for domestic jobs creation, with virtually no consequent job destruction
- **Energy Security** Domestic production decreases vulnerability to short-term economic disruption due to war, civil unrest, OPEC action, speculation, etc
- Environmental Benefits Sustainable biomass production can reduce harmful emissions versus petroleum-based fuels on a life-cycle basis

Fuel from domestic biomass versus imported crude oil helps grow the US economy

## Potential Impacts of a Billion-Ton Bioeconomy

Energy Efficiency & Renewable Energy

The **bioeconomy** is a global industrial transition of sustainably utilizing renewable aquatic and terrestrial biomass resources in energy, intermediate, and final products for economic, environmental, social, and national security benefits.

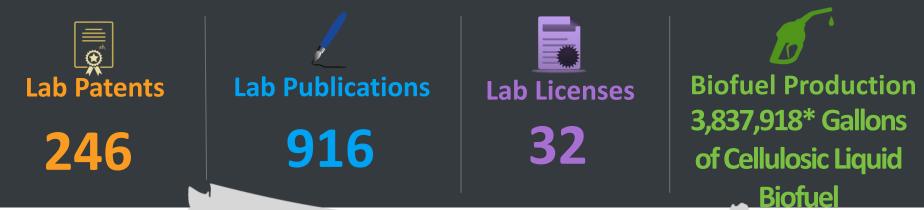

1 billion tons of biomass could be sustainably produced in the United States.

### **BETO Impacts**

**ENERGY** Energy Renew

Energy Efficiency & Renewable Energy

## Since 2009 ...

More than **285K jobs** from biofuels in 2014\*\*

## **\* \* \* \* \* \* \* \* \* \* \* \* \*** \* **\*** \*

1.1 million potential direct jobs by 2030\*\*

\* 2016 Renewable Fuel Standard Data

\*\* Rogers et al. 2016, Ethanol-Economic-Impact-for-2015, & RFS-Premier-Energy-Program-2016

## **BETO Technology in the Market**

#### BETO Technology in the Market

#### R&D + Industry Partnership

#### Impact

**Energy Efficiency &** 

**Renewable Energy** 

U.S. DEPARTMENT OF

ENERGY

Self-propelled woody crop harvester

ESF

State University of New York College of Environmental Science and Forestry

- Case New Holland commercialized their system, which doubled output while cutting costs by 33%
- Fort Drum Army base in NY is run by a 60-megawatt biomass power plant, partially fueled by woody biomass harvested with this technology

Coca-Cola PlantBottle

Fuel Blend Stock

- Virent produces biointermediates for fuels and products
- Tesoro acquired Virent and plans to scale-up
- Coca-Cola and Virent plan to produce 100% PlantBottles by 2020 (35 billion bottles)

## **BETO Technology Approaching the Market**

Energy Efficiency & Renewable Energy

#### BETO Technology Approaching the Market

R&D + Industry Partnership

Stabilized Pyrolysis

Petrobras Refinery

Oil

 LanzaTech licensed microbial strains to produce alcohol

Impact

- Neat fuel meets alcohol-to-jet specs and 50% Jet A blend meets ASTM specs
- Demonstration fuel will be used in future flight test with Virgin Atlantic to support goal of adding to ASTM D7566, Annex 5

Imperium renewables

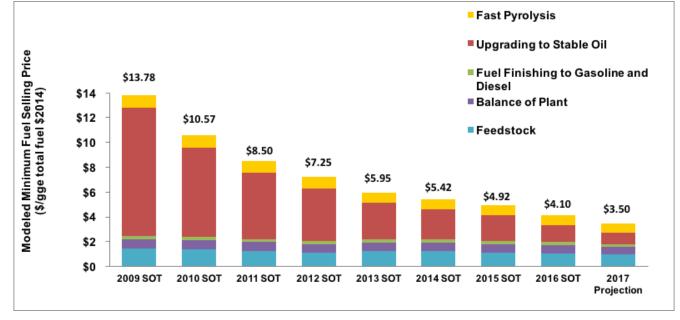

- Ensyn produces renewable bio-oil to be co-processed with petroleum sources or to sell for heating
- Processing utilizes existing 6 million BBL/day US FCC capacity
- Co-processed diesel and gasoline were approved as EPA registered fuels and under LCFS by CARB

## Trajectory to Cost-Competitive Gasoline & Diesel Blendstock Fuel

Energy Efficiency & Renewable Energy

U.S. DEPARTMENT OF

ENERGY

- Biomass derived liquid transportation fuels have the potential to be competitive—without subsidies—with their fossil derived equivalents
- The pathway presented here (the conversion of biomass into infrastructure-compatible hydrocarbon fuels via fast pyrolysis) represents a goal case targeting performance potentially available between now and 2017
- Based on this design case, a total potential cost reduction of 75% can be achieved between 2009 and 2017 with continued funding of R&D activities
- In FY17/18, BETO will initiate analysis on R&D needed to enable price competitive biofuels (\$2/gge)

#### BETO R&D plays a crucial role reducing the costs of biofuels without subsidies.

## **FY18 Budget Request**

**ENERGY** Energy Efficiency & Renewable Energy

FY 2016 Enacted*	FY 2017 Enacted*	FY 2018 Request*	FY 2018 House Marks*
85,500	90,230	34,600	-
75,100	54,041	6,000	-
11,000	10,729	5,000	-

### **Bioenergy Technologies (\$56.6 million) Priorities:**

- *Advanced Algal Systems*: Multi-lab consortium to develop promising algae strains to improve algae strain productivity and yield
- *Feedstocks and Supply Logistics*: Improve the quality and consistency of bioenergy feedstocks with a specific emphasis on Feedstock-Conversion Interface R&D to improve downstream conversion efficiency.
- **Conversion**: Synthetic biology of engineered organisms and development of novel catalysts to improve yields and selectivity of renewable chemicals and drop-in biofuels
- Advanced Development and Optimization: Co-Optimization of Fuels and Engines to develop bio-based fuels/additives that enable 15-20% fuel economy gain when blended with petroleum and used in high-efficiency engines
- **Strategic Analysis and Sustainability**: Pathways to achieve target of \$2/gge; sustainability research into strategies for increasing bioenergy production without detriment to food security, air, land, and water

## **THANK YOU** again to all the Lead Reviewers and Steering Committee, as well as AetherQuest and BCS staff.
