Submitter Info

Comment:	BUILD MORE clean GAS Power plants (average AGE 22 years old, Natural gas-fired generation have low capital costs and are, in general, relatively less expensive than some competing technologies. They are also much less land-intensive than many other types of generation, and thus often can be more easily sited in urban areas near electric demand. Natural gas pipelines can be built more quickly than electric transmission lines (in most states) because they have a comparatively streamlined permitting process, which often has made it easier for a plant developer to build a new gas-fired plant near a large electric load than to build a power plant farther away
-----------------	--

and transmit its electricity to large load centers by wire.
Build DAMS FOR U.S. HYDRO. average age 60 years old, WHY
?????, In 2016, natural gas-fired generators accounted for 42%
of the operating electricity generating capacity in the United
States. Natural gas provided 34% of total electricity
generation in 2016, average age of U.S. natural gas power
plants is 22 years, hydro (64 years), coal (39 years), and
nuclear (36 years) hydro capacity is located in the States of
Washington, California, and Oregon. The hydropower fleet is
the oldest in the U.S. Approximately 50 percent of hydropower
capacity is owned by the Federal Government *🌐
