Comment:	United States is the largest producer of natural gas in the world and has a large and growing natural gas resource base. Rescinding the rule would provide an economic boost across the economy and enable America to more fully capitalize on its incredible natural gas resource base. should not impede export trade of liquefied natural gas (LNG) which provide an economic boost across the economy and enable America to more fully capitalize on its incredible natural gas resource base." The recent NERA report found that allowing overseas sales of LNG would further strengthen the natural gas industry and in particular, our nation's economy. Moreover, the report also
-----------------	---

noted that for every one of the market scenarios examined, net economic benefits increased as LNG exports increased. These valuable benefits cannot be overlooked, especially during a time of positive, but fragile economic recovery." The additional natural gas production needed to meet the resulting new exports will create countless well-paying, permanent American jobs throughout the energy supply chain. There is no better time than now to act in the interest of American workers, businesses, and overall American economic growth." The domestic shale gas revolution in the United States has opened up opportunities that only a few short years ago seemed unattainable. ... Over the long term, however, access to new markets abroad, in addition to those here at home, is necessary to ensure that the required level of investment in upstream development and midstream infrastructure continues." Exporting natural gas abroad will help U.S. balance of payments, create good paying American jobs, and provide significant tax revenue to our local, state, and federal governments." This is an important first step in removing DOE's regulatory stranglehold and allowing energy producers to capture the vast economic potential that exporting would provide." Removing barriers of LNG and drilling will keep the U.S. competitive in the growing global market for clean-burning natural gas. But more than that, the U.S. will help bring stability to the global energy marketplace and make it much harder for bullies like Russian President Vladimir Putin to suppress free nations like Ukraine. Besides helping our allies, expediting permits for LNG export facilities currently before the Department of Energy and removing barriers to future permits will keep the U.S. competitive in the growing global market for clean-burning natural gas. We should not miss this rare opportunity, *🌐
