What We'll Cover Today

- NGLS Background
- Evaluation Framework
- Lessons Learned
 - System Architecture
 - Operational Complexity
 - Configuration Tools
 - Wall Controls
 - Communication
- Next Steps

NGL Background

- First competition in 2008
- 14 Steering Committee members, majority involved for 10 years
- Weekly Steering Committee calls (indoor and outdoor)
- 15 separate judging/evaluation events
- 64 different lighting professionals involved as judges
- Over 1300 products submitted by over 300 manufacturers

From NGL to NGLS

- 2008: Focus on LED luminaires of different types
- 2012: Split into separate Indoor and Outdoor Competitions
- 2015: Focus on controllability and serviceability
- 2016: Focus on specific applications and connected systems
- From **Next Generation Luminaires** to **Next Generation Lighting Systems**
- **2017: Exclusively Indoor Connected Lighting Systems**
- Build on 2016 experience
- Separate into levels of system complexity
- Permanent installations
- Ongoing evaluations

Leveraging What We Know

NGL Luminaire Competitions

- Subjective designer viewpoint
- Specifier manufacturer communication
- 'Staged' environments
- Difficult controls evaluations

Connected Lighting Systems Program

- Configuration Complexity
- CLTB

The Sweet Spot

GATEWAY Demonstrations

- Real sites and users
- Harsh realities become apparent
- Lessons apply to a more limited audience with similar conditions

Configuration Complexity

- Complicated systems have historically under performed.
- More energy will be saved if control systems are working correctly.
- For systems to be broadly deployed, configuration complexity must be reduced.

Subjective Evaluations

- To find the real 'pressure points', *people* need to observe and evaluate the *people* installing and configuring the system in real time, without assistance - it just can't be done in a demonstration, mock-up, or testing lab.

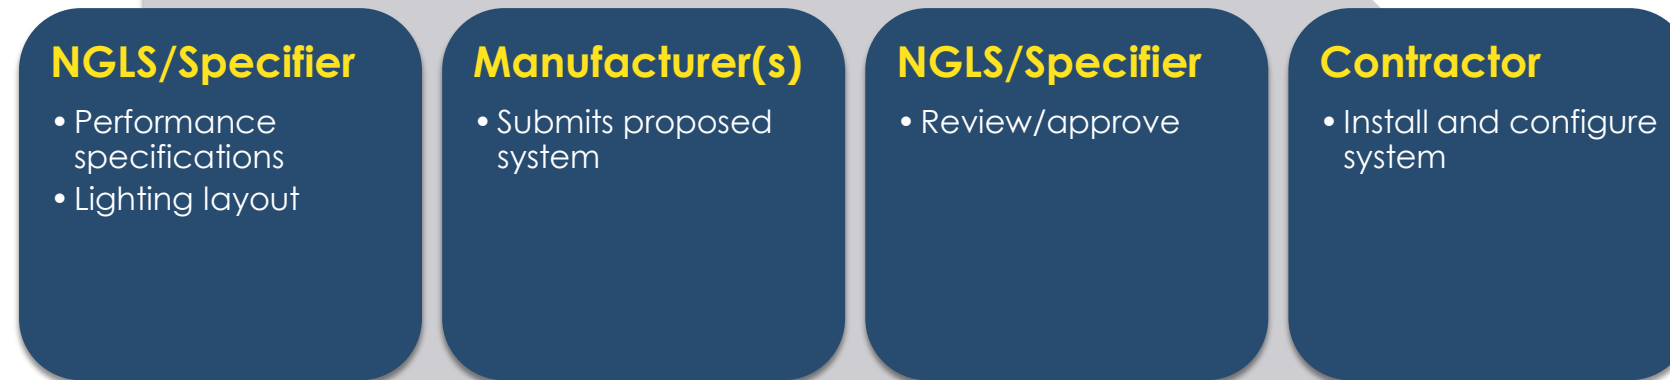

Design & Installation Process

- Model the process to learn and share

Identify challenges faced in design, installation, and configuration.

Identify documentation and communication challenges

Provide feedback to manufacturers to influence product innovation – what worked, what didn't?

Identify key elements to include in a specification.

Living Lab

NGLS Initial Focus

- Luminaire and control systems that are:
 - Marketed as “easy” to install and configure
 - Intended for contractor setup and configuration without prior training
 - Configurable without manufacturer assistance
 - No lighting designer involved

We had to start with the most basic systems to develop our evaluation protocols and procedures and come away with results and recommendations that are tangible and actionable.

System Requirements

	Evaluation 1	Evaluation 2
Function	Required	Required
Occupancy Sensing	Y	Y
Vacancy Sensing	Y	Y
Local on/off	Y	Y
Daylight Harvesting	Y	Y
Manual Continuous Dimming	Y	Y
High-End Trim/Task Tuning	Y	Y
Zoning	Y	Y
Luminaire Integrated Sensor and Control	preferred	Y
Field-adjustable Control Settings	preferred	Y

Control Performance Requirements

1. **Vacancy control** (manual on/auto off) of two zones with a time out period of 5 minutes.
2. **Manual continuous dimming** of the same two zones indicated in item 1. Minimum dimming level of each zone shall be $\leq 10\%$ of lumen output.
3. **Daylight harvesting** to maintain task plane illumination at the current level provided by the electric lighting (whether full output, task-tuned, or manual dimmed).
4. **Field-adjustable high-end trim** to lower maximum system light output. System shall be delivered with high-end trim set at 100%.
5. Control settings shall be adjustable by the user **without factory assistance**.

Installation Evaluation Process

- Three evaluation phases
 - Install luminaires
 - Install and start up controls
 - Adjust control settings
- After each phase, contractor and NGLS judges independently evaluate:
 - Manufacturer's documents
 - Ease/difficulty
 - Strengths and weaknesses
- Conclude with videotaped contractor interviews

Performance Evaluation Process

- Lighting Performance
 - Lighting effects, luminaire construction and appearance
 - Measured performance (illuminance, CCT, luminance, etc.)
- Control System Performance
 - Ease of use
 - Measured performance

Evaluation Two – Retrofit Kits

Participating Manufacturers

Competition One

Company	Control System	Luminaire
Lumenwerx	Magnum	Reven SIB
Selux	Easy Sense	M36 D-1
Crestron	Zum	Starfire Versalux D-I
Philips Lighting	SpaceWise DT	Sona
RAB Lighting	RAB LightCloud	Swish 2x2
Cree	SmartCast	CR22
Nextek Power Systems	Sky Control	Independence iLED R Series

Competition Two

Company	Control System	Retrofit Kit
Philips Lighting	SpaceWise DT	EvoKit Troffer Retrofit Kit
Lutron Electronics	Vive	Orion Ison Retrofit Modular
Acuity Brands	nLIGHT AIR	BLT Relight Series Kit
Eaton	WaveLinx	Metalux Cruze LED Retrofit Kit
LG Electronics	Sensor Connect	Simple Choice Retrofit Kit

Onsite Manufacturer Participation

LIGHTING SYSTEMS

OPERATIONAL COMPLEXITY

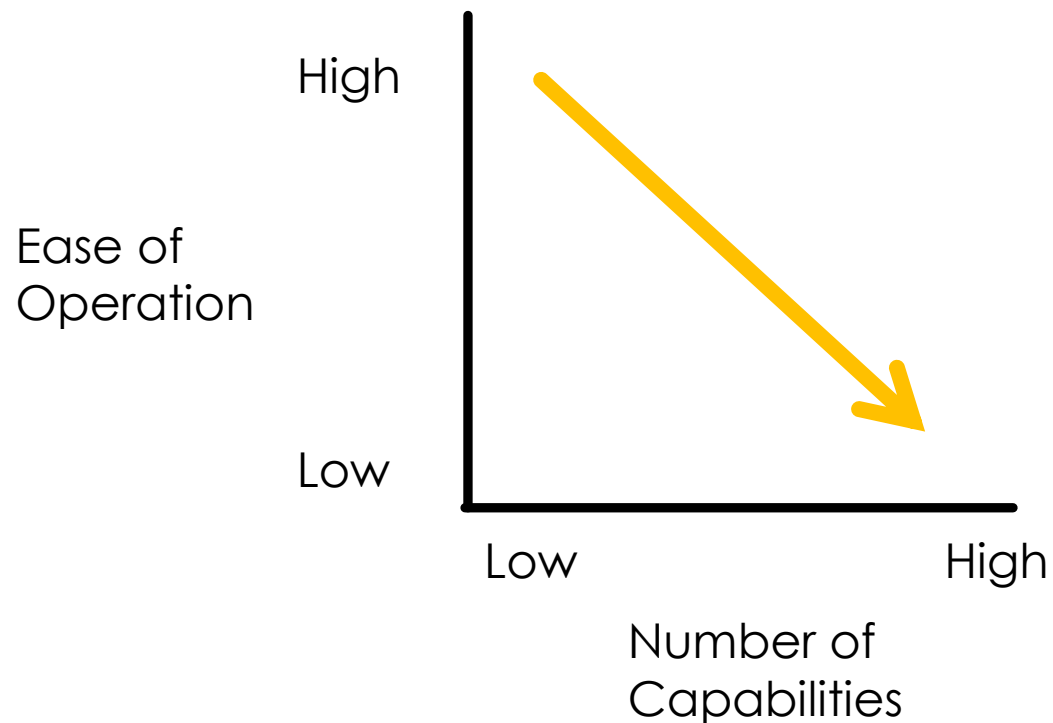

Initial Startup Approach

<ul style="list-style-type: none">• Pre-configured out-of-the box operation	<ul style="list-style-type: none">• Onsite pairing of luminaires to wall switches• Factory-set default operational settings	<ul style="list-style-type: none">• Onsite pairing of luminaires to wall switches• Various additional steps• Factory-set default operational settings	<ul style="list-style-type: none">• Onsite pairing of luminaires to wall switches• Onsite configuration of external daylighting and occupancy sensors
(2)	(5)	(3)	(2)

Operational Complexity

- Clear relationship between system capabilities and ease of operation;

Need appropriate balance between simplicity and functionality for each application!

COMMUNICATION

The single biggest problem in communication is the illusion that it has taken place.

George Bernard Shaw

Vocabulary

- We all speak a different language
 - Designers
 - Product & IT Engineers
 - Contractors

Documentation

How We Plan to Release Findings

- Conference presentations
- Feature articles in target publications
- NGLS website
- One pagers by topic and audience

Next Steps

- If there is consensus that things should be done the same way – work on standards
- If there are multiple ways to do things – work on templates or models
- If there is no consensus – conduct more studies to figure it out

2018 Outdoor Evaluations

- Virginia Tech Transportation Institute
- VTOLL – Virginia Tech Outdoor Living Lab - collaboration with other VT activities
- Parking garage/lot connected lighting focus – informs other applications
- Coordination with DOE Connected Lighting Test Bed in Portland

Thanks!
