

Addressing Excess Contaminated Facilities on the Oak Ridge Reservation

Jay Mullis, Manager
Oak Ridge Office of Environmental Management

September 12, 2018

Congress and the EM Program are committed to meaningful risk reduction across the DOE complex

- Government Accountability Office and Inspector General audits identified numerous high risk excess facilities in deteriorating conditions across the DOE complex
- A working group was established to examine and prioritize excess facilities to address risks
- The Administration and Congress responded by requesting and appropriating funds to begin addressing these risks in Fiscal Year 2016

Excess contaminated facilities are a significant liability for Oak Ridge

Excess Facilities at Y-12

Excess Facilities at ORNL

- 200+ excess buildings
- Oak Ridge contains 64 of DOE's 182 high-risk facilities
- Wide range of physical, chemical, and nuclear hazards that present risk to critical ongoing research and national security missions

The Oak Ridge EM program has appropriated funding available to address risks at Y-12 and ORNL

- OREM has received nearly \$225 million through Fiscal Year 2018 to address excess contaminated facilities
- Objective is to characterize and abate hazards, place buildings into a stable condition, and ultimately demolish unneeded facilities
- Enables OREM to reduce its environmental liabilities sooner than originally planned
- Additional funding requested in FY 2019 would allow for continued progress
