

The Changing Needs of the Western Interconnection

March 18,2019

Byron Woertz

Manager of

System Adequacy Planning

Who We Are

Not-for-Profit Organization

• Assure reliable bulk power system in the Western Interconnection

Regional Entity

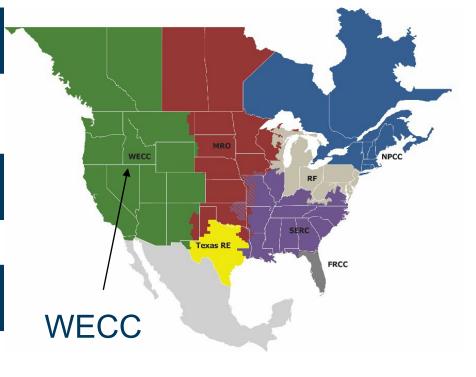

- Approved by FERC
- Largest of seven

Authority delegated by NERC

• Create, monitor, and enforce reliability standards

Unique Perspective

• Both Region and Interconnection

What We Do

Compliance

- Ensure compliance with NERC reliability standards
- Conduct audits every 1-3 years

Planning

- Reliability Assessments 0-20 years in the future
- Essential Reliability Services, Economics and Policy Impacts
- Event Analysis
- Situational Awareness
- Performance Analysis

From Past to Future

Tool-Based Approach

- What can we learn from PCM analyses?
- What can we learn from power flow analyses?

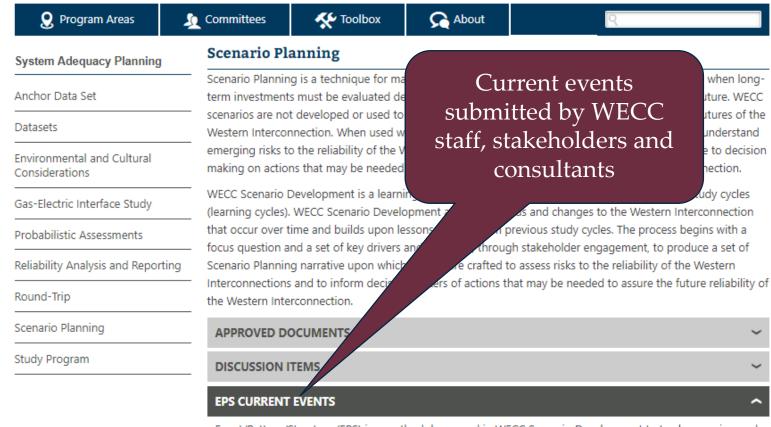

Risk-Based Approach

- What potential future reliability risks should we be thinking about?
- How can we study them?

How Are Things Changing?

Event/Pattern/Structure (EPS) is a methodology used in WECC Scenario Development to track, organize, and analyze current events in a way that focuses on how the constituent parts of an event interrelate and how a collection of events interrelates in the broader context of the Western Interconnection as a whole. WECC Near-Term Priorities

Representation of Inverter-Based Resources

Improve modeling representation

Data collection for utility-scale, battery storage and DER Impacts of the Changing Resource Mix

Impacts on path ratings

Modeling transmissiondistribution interface

Impacts on essential reliability services Expansion of RC and Market
Service
Providers

Potential reliability risks and mitigations

Consider regional standards

Clarify Roles in BPS Planning

Improve coordination by clarifying roles and responsibilities

WECC Scenarios

Scenario 1

Open Market, Restricted Customer Choice Scenario 2

Open Market, High Customer Choice

Scenario 3

High Mandates, Restricted Customer Choice Scenario 4

High Mandates, High Customer Choice

2019 Reliability Assessments

Changes to System Inertia with High Renewable Implementation

- How would major changes to system inertia affect Essential Reliability Services such as frequency response?
- Retirement of 90 to 100% of the coal fleet
- Increase in renewable penetration

Significant Electrification

- What reliability risks could be created by large-scale electrification?
 - High market penetration of passenger and commercial electric vehicles
 - •Significant effort to electrify non-electrical energy uses
 - •Increasing penetration of electronically interfaced end-use loads?

System Resilience Under Extreme Natural Disaster

• What are the reliability impacts, regionally and systemwide, of a major natural disaster such as a wildfire or earthquake?

2019 Reliability Assessments

El Paso Natural Gas Pipeline Disruption

• Would an interruption in gas supply from the El Paso Pipeline, as described in WECC's Gas-Electric Interface Study, create stability risks in Southern California or Arizona?

Water Availability Issues

• How will limitations on water availability in the next 10-20 years impact reliability?

Reliability Impacts of Most Likely Year 10 Future

• In the Year 10 "Base Case" (2028), are there any reliability risks associated with path flows, resource adequacy, system stability or other parameters?

WECC 2019 Assessments Schedule

Jan 28 – Apr 12

• Finalize Assessment Scopes Apr 14 – Jun 14

Identify and Collect Needed Data Sep 1 – Sep 30

• Review Assessment Results

Apr 1 – May 31

• Determine Modeling Tools Jun 16 – Aug 31

• Complete Assessments Oct 1 – Dec 31

• Report on Assessment Results
