

FEMP's Workforce Development Offerings

The Federal Energy Management Program (FEMP) offers training to develop and sustain a high-performance federal workforce that constructs, operates, and maintains energy-efficient and cost-effective federal facilities and fleets.

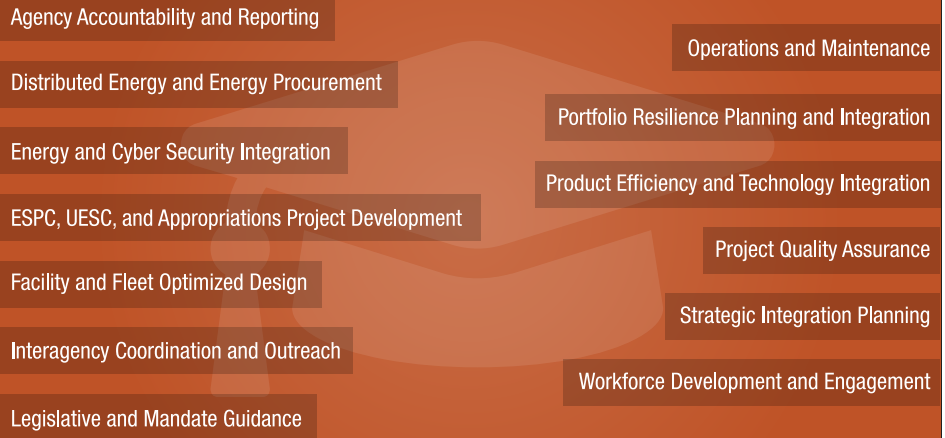

FEMP strives to enhance workforce competencies and strengthen job performance through developing innovative trainings and leveraging public-private partnerships.

Take FEMP Courses on the WBDG

FEMP partners with the National Institute of Building Sciences' Whole Building Design Guide (WBDG) to deliver high-quality training courses that support federal agencies in their workforce development.

FEMP training is accessed through the WBDG's learning management system.

To take FEMP courses, visit www.wbdg.org/user/login and sign into your WBDG account. If you don't have a WBDG account, you can create one.

FEMP offers 13 training curriculums designed to help agencies develop areas of energy-management expertise.

Training Types

FEMP's training types include:

-  Live online webinars
-  Live on-site workshops and Energy Exchange sessions
-  On-demand courses.

Accredited Courses

The International Association for Continuing Education and Training (IACET) is the premier standard-setting organization accredited by the American National Standards Institute for Continuing Education and Training.

FEMP is accredited by the IACET and is an authorized provider of IACET continuing education units (CEUs). CEUs are awarded to students upon the successful completion of select FEMP courses, a course assessment, and an evaluation.

Federal Building Personnel Training Act

FEMP is working with the General Services Administration (GSA) to develop courses that cover the core competencies of the Federal Building Personnel Training Act (FBPTA) of 2010.

In accordance with the FBPTA, GSA developed the core competencies "for personnel performing building operations and maintenance, energy management, sustainability, water efficiency, safety (including electrical safety), building performance measures and design functions."

FEMP will continue to develop training courses that support the FBPTA. In the meantime, GSA recommends a myriad of FEMP courses and seminars that fulfill FBPTA requirements through the Facilities Management Institute website at www.fmi.gov.

FEMP Training Catalog

The FEMP Training Catalog features online and onsite training offered by FEMP.

Turn this fact sheet over to see the latest design and preview the features now available in the FEMP Training Catalog.
